SAFETY INFORMATION

A

CAUTION

This service manual is intended for qualified service technicians; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual. Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

- B
- 1. Safety Precautions for those who Service this Unit.**
- Follow the adjustment steps in the service manual when servicing this unit. When check - ing or adjusting the emitting power of the laser diode exercise caution in order to get safe, reliable results.

Caution:

- During repair or tests, minimum distance of 13 cm from the focus lens must be kept.
- During repair or tests, do not view laser beam for 10 seconds or longer.

- 2. The triangular label is attached to the mechanism unit frame.**

C

CAUTION

This product contains a laser diode of higher class than 1. To ensure continued safety, do not remove any covers or attempt to gain access to the inside of the product. Refer all servicing to qualified personnel.

The following caution label appears on your unit.

小心:

本产品包含有1级以上的镭射二极管。为了保证安全，切勿打开任何机盖或者试图接触本机内部，必要时应请求专业技术人员提供服务。

下面的提醒标签贴于本机上。

位置：本机后面板上。

D

CAUTION

VISIBLE AND INVISIBLE LASER RADIATION WHEN OPEN.

AVOID EXPOSURE TO BEAM.

VORSICHT

SICHTBARE UND UNSICHTBARE LASERSTRAHLUNG, WENN ABDECKUNG GE...FFNET NICHT DEM STRAHL AUSSETZEN!

ADVARSEL

SYNLIG OG OSYNLIG LASERSTRÅLING VED ÅPNING

UNNGÅ UDSÆTTELSE FOR STRÅLING.

VARNING

SYNLIG OCH OSYNLIG LASERSTRÅLNING NÄR DENNA

DEL ÅPPNAS BETRÄKTA EJ STRÅLEN.

VARO!

AVATTAESSA ALTISTUTIN KÄYNNÄ KÄYTTÄMÄLLÄ

LASERSATEILYLLÄ. KÄÄTÄ SO SATEEN.

VRW1860

CAUTION

VISIBLE AND INVISIBLE LASER RADIATION WHEN OPEN. AVOID EXPOSURE TO BEAM.

注意

若打开会发生可见和不可见的

镭射辐射，请勿受辐射。

VRW1904

WARNING!

The AEL (accessible emission level) of the laser power output is less than CLASS 1 but the laser component is capable of emitting radiation exceeding the limit for CLASS 1.

A specially instructed person should do servicing operation of the apparatus.

Laser diode characteristics

Wave length:

DVD:640 nm to 660 nm

CD:770 nm to 810 nm

DVD : 2.48 mW(Emitting period :9 sec.)

CD : 705 μ W(Emitting period : unlimited)

Additional Laser Caution

Transistors Q1101 and Q1102 in PCB drive the laser diodes for DVD and CD respectively. When Q1101 or Q1102 is shorted between their terminals, the laser diodes for DVD or CD will radiate beam. If the top cover is removed with no disc loaded while such short-circuit is continued, the naked eyes may be exposed to the laser beam.

CAUTION

Danger of explosion if battery is incorrectly replaced.

Replaced only with the same or equivalent type recommended by the manufacture.

Discard used batteries according to the manufacture's instructions.

[Important Check Points for Good Servicing]

In this manual, procedures that must be performed during repairs are marked with the below symbol. Please be sure to confirm and follow these procedures.

A

1. Product safety

Please conform to product regulations (such as safety and radiation regulations), and maintain a safe servicing environment by following the safety instructions described in this manual.

- ① Use specified parts for repair.

Use genuine parts. Be sure to use important parts for safety.

- ② Do not perform modifications without proper instructions.

Please follow the specified safety methods when modification (addition/change of parts) is required due to interferences such as radio/TV interference and foreign noise.

- ③ Make sure the soldering of repaired locations is properly performed.

When you solder while repairing, please be sure that there are no cold solder and other debris. Soldering should be finished with the proper quantity. (Refer to the example)

- ④ Make sure the screws are tightly fastened.

Please be sure that all screws are fastened, and that there are no loose screws.

- ⑤ Make sure each connectors are correctly inserted.

Please be sure that all connectors are inserted, and that there are no imperfect insertion.

- ⑥ Make sure the wiring cables are set to their original state.

Please replace the wiring and cables to the original state after repairs. In addition, be sure that there are no pinched wires, etc.

- ⑦ Make sure screws and soldering scraps do not remain inside the product.

Please check that neither solder debris nor screws remain inside the product.

- ⑧ There should be no semi-broken wires, scratches, melting, etc. on the coating of the power cord.

Damaged power cords may lead to fire accidents, so please be sure that there are no damages. If you find a damaged power cord, please exchange it with a suitable one.

- ⑨ There should be no spark traces or similar marks on the power plug.

When spark traces or similar marks are found on the power supply plug, please check the connection and advise on secure connections and suitable usage. Please exchange the power cord if necessary.

- ⑩ Safe environment should be secured during servicing.

When you perform repairs, please pay attention to static electricity, furniture, household articles, etc. in order to prevent injuries. Please pay attention to your surroundings and repair safely.

B

C

D

2. Adjustments

To keep the original performance of the products, optimum adjustments and confirmation of characteristics within specification. Adjustments should be performed in accordance with the procedures/instructions described in this manual.

3. Lubricants, Glues, and Replacement parts

Use grease and adhesives that are equal to the specified substance. Make sure the proper amount is applied.

E

4. Cleaning

For parts that require cleaning, such as optical pickups, tape deck heads, lenses and mirrors used in projection monitors, proper cleaning should be performed to restore their performances.

5. Shipping mode and Shipping screws

To protect products from damages or failures during transit, the shipping mode should be set or the shipping screws should be installed before shipment. Please be sure to follow this method especially if it is specified in this manual.

1. SERVICE PRECAUTIONS

● Service Precautions !

- 1) You should conform to the regulations governing the product (safety, radio and noise, and other regulations), and should keep the safety during servicing by following the safety instructions described in this manual.
- 2) Be careful in handling ICs. Some ICs such as MOS type are so fragile that they can be damaged by electrostatic induction.
- 3) Before disassembling the unit, be sure to turn off the power. Unplugging and plugging the connectors during power-on mode may damage the ICs inside the unit.
- 4) To protect the pickup unit from electrostatic discharge during servicing, take an appropriate treatment (shorting-solder) by referring to "the DISASSEMBLY".
- 5) After replacing the pickup unit, be sure to skew adjustment.
- 6) During disassembly, be sure to turn the power off since an internal IC might be destroyed when a connector is plugged or unplugged.
- 7) In case the internal fuse has blown, check the voltage of the rear stage.
- 8) Handling instructions for touch panel
Please handle the touch panel with care as it contains glass.
Dropping or giving a strong shock may break the panel.
Wear gloves, etc. to protect your hands from the glass edges that are not deburred.
- 9) Remove a small board (2 screws) provided for pulling out an RCA line, before removing the mother board.
- 10) Hot areas
Red area: Hot area. Be careful not to burn yourself

Moter Unit(Side A)

Moter Unit(Side B)

Red-circled area: The heat from hot parts on the B-side of the board is removed from the product bottom through a heat transfer sheet.

Be careful not to burn yourself with the hot area.

Bottom

NOTES ON SOLDERING

- For environmental protection, lead-free solder is used on the printed circuit boards mounted in this unit.
Be sure to use lead-free solder and a soldering iron that can meet specifications for use with lead-free solders for repairs accompanied by reworking of soldering.
- Compared with conventional eutectic solders, lead-free solders have higher melting points, by approximately 40°C.
Therefore, for lead-free soldering, the tip temperature of a soldering iron must be set to around 373 °C in general, although the temperature depends on the heat capacity of the PC board on which reworking is required and the weight of the tip of the soldering iron.

Compared with eutectic solders, lead-free solders have higher bond strengths but slower wetting times and higher melting temperatures (hard to melt/easy to harden).

The following lead-free solders are available as service parts:

- Parts numbers of lead-free solder:
GYP1006 1.0 in dia.
GYP1007 0.6 in dia.
GYP1008 0.3 in dia.

- This player can only play back discs bearing the marks shown above.

2.3 PANEL FACILITIES

What's What Head unit

① **DISPLAY button**

Press to turn the information display on or off when the video is displayed.

Press and hold to switch between the displays on the sub-display.

- When a rear view camera video is displayed, press and hold **DISPLAY** return to the source display.

② **PGM button**

Press to operate the preprogrammed functions for each source.

③ **Ambient light sensor**

Senses ambient light. This system automatically adjusts the brightness of the display to compensate for ambient light.

④ **FLIP DOWN button**

Press to turn the LCD panel horizontal temporarily from upright position.

⑤ **OPEN/CLOSE button**

Press to open or close the LCD panel.

⑥ **RESET button**

Press to return to the factory settings (initial settings).

⑦ **DETACH button**

Press to remove the front panel from the head unit.

⑧ **EJECT button**

Press to eject a disc from this unit.

⑨ **◀◀/▶▶ button**

Press to do manual seek tuning, fast forward, reverse and track search controls.

⑩ **BAND/ESC button**

Press to select among three FM bands and one AM band and to cancel the control mode of functions.

⑪ **SOURCE button**

This unit is turned on by selecting a source. Press to cycle through all the available sources.

⑫ **Disc loading slot**

Insert a disc to play.

⑬ **VOLUME/ATT button**

Rotate it to increase or decrease the volume.

Press to quickly lower the volume level, by about 90%. Press once more to return to the original volume level.

C	18 AUTO PLAY button	Press to turn the DVD auto-playback function on or off.	
	19 ▲/▼ buttons (FOLDER)	Press to select the next/previous folder.	
	20 Joystick	Move to do fast forward, reverse and track search controls. Click to recall MENU .	Move to select a menu on the DVD menu.
D	21 MENU button	Press to display the DVD menu during DVD playback.	
	TOP MENU button	Press to return to the top menu during DVD playback.	

Using the remote control operation mode switch

There are three remote control operation modes on the remote control.

AVH mode operation

When operating this unit by remote control, the mode is normally switched to **AVH**.

DVD mode operation

If you switch the mode to **DVD**, the joystick and **0** to **10** operations are changed for DVD player.

● When you want to operate the following functions, switch the mode to DVD:

- When operating the DVD menu by using the joystick.

- When operating the PBC menu by using **0** to **10**.

TV mode operation

TV operations available with a Pioneer TV tuner (e.g. GEX-P5750TV(P)) can be controlled with **AVH** mode. **TV** mode is not used with this unit.

- For details concerning operation, refer to the TV tuner's operation manuals. □

Fastening the front panel

If you do not plan to detach the front panel, the front panel can be fastened with supplied screws.

- Fix the front panel to the unit using screws after removing the trim ring.**

2.4 CONNECTION DIAGRAM

● Connection Diagram

3. BASIC ITEMS FOR SERVICE

3.1 CHECK POINTS AFTER SERVICING

CHECK POINTS AFTER SERVICING (AVH)

To keep the product quality after servicing, please confirm following check points.

No.		Procedures	Check points	Remark
1		Confirm whether the customer complain has been solved. If the customer complain occurs with the specific media, use it for the operation check.	The customer complain must not be reappeared. Display, video, audio and operations must be normal.	When flap-mecha exists
2	Flap-mecha	Check the operation of the flap mechanism.	The flap mechanism operation must be smooth without making the noise and scratches.	
3	DVD	Measure playback error rates at the innermost and outermost tracks by using the test mode with the following disc. DVD test disc (GGV1025)	Deterioration of mecha-drive can be checked. The error rates must be <u>less than 2.5e-4</u> .	
4	DVD	Play back a DVD. (Menu operation; Title/chapter search)	Display, video, audio and operations must be normal.	
5	CD	Play back a CD. (Track search)	Display, audio and operations must be normal.	
6	FM/AM tuner	Check FM/AM tuner action. (Seek, Preset) Switch band to check both FM and AM.	Display, audio and operations must be normal.	
7	TV tuner	Check TV tuner action. (Seek; Preset)	Display, video, audio and operations must be normal.	
8		Check whether no disc is inside the product.	The media used for the operating check must be ejected.	
9		Appearance check	No scratches or dirt on its appearance after receiving it for service.	

See the table below for the items to be checked regarding video and audio:

Item to be checked regarding video	Item to be checked regarding audio
Block-noise	Distortion
Horizontal noise	Noise
Dot noise	Volume too low
Disturbed image (video jumpiness)	Volume too high
Too dark	Volume fluctuating
Too bright	Sound interrupted
Mottled color

Check 6: Is SDRAM I/F OK?

A

<Outline> In order to secure the MPEG stream data as the buffer,
the capacity of communication I/F SDRAM between the LSI and the memory is 128Mbit.
Be careful as XCSM, XWE, XCAS, XRAS and XSCM of IC1481 are called differently in IC1501,
namely NCSM, NWE, NCAS, NRAS, NCSM.

Fig 10.9: 6ch digital out/Ripping check point

Check 11: Is the video circuit OK?

<Outline> Composite signal and component signal are output from DVD-LSI (IC1501), and are output from the HOST I/F (CN1901) via a buffer circuit.

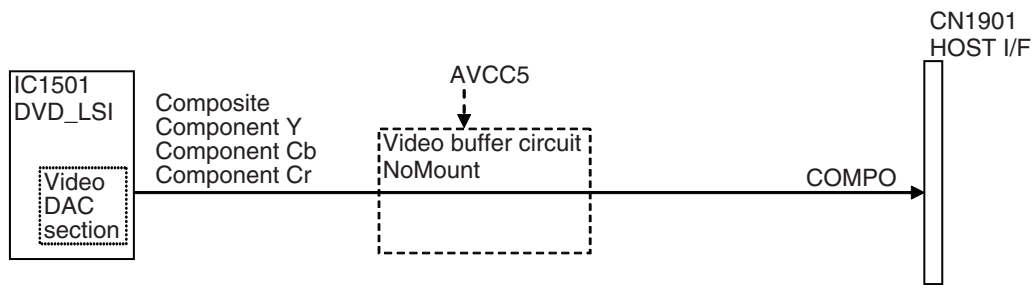

Fig 11.1: Video circuit

<Checking method> Playback DVD-REF-A1 TITLE2 CHAPTER5 (WHITE 100%), and monitor COMPO signal with an oscilloscope with GNDV1 (stylus) being the reference. Set the trigger mode to "TV trigger" and the trigger line to "150 line".

Check point 1 (stylus)

NO.		Specification value	Reference waveform
1	COMPO	1 000 mVpp \pm 5 %	Waveform 6

In case of NG, check the applicable line, the periphery of the major components in the drawing above, soldering of the peripheral components and defective components.

Fig 11.2: Waveform for the case of composite white 100% output

<Video level readjustment method>

In case the video composite output is outside of the specification value, readjust the level according to the method described below. (Note : Units are exchanged, the video output is not adjusted.)

Turn the volume (VR1671) to adjust the video level within the range of 1.0 \pm 0.02 Vpp.

The adjustment specification is 1.0 \pm 0.02 Vpp.

Fig 11.3: Video circuit (component)

<Checking method> Playback DVD-REF-A1 TITLE2 CHAPTER19 (100% Color Bars), and monitor Y, Cb, and Cr signal with an oscilloscope with GNDV1 (stylus) being the reference. Set the trigger mode to “TV trigger” and the trigger line to “150 line”.

NO.	Check point 1 (stylus)	Specification value	Reference waveform
2	Y	1 000 mVpp \pm 5%	Waveform 7
3	Cb	700 mVpp \pm 5%	Waveform 7
4	Cr	700 mVpp \pm 5%	Waveform 7

In case of NG, check the applicable line, the periphery of the major components in the drawing above, soldering of the peripheral components and defective components.

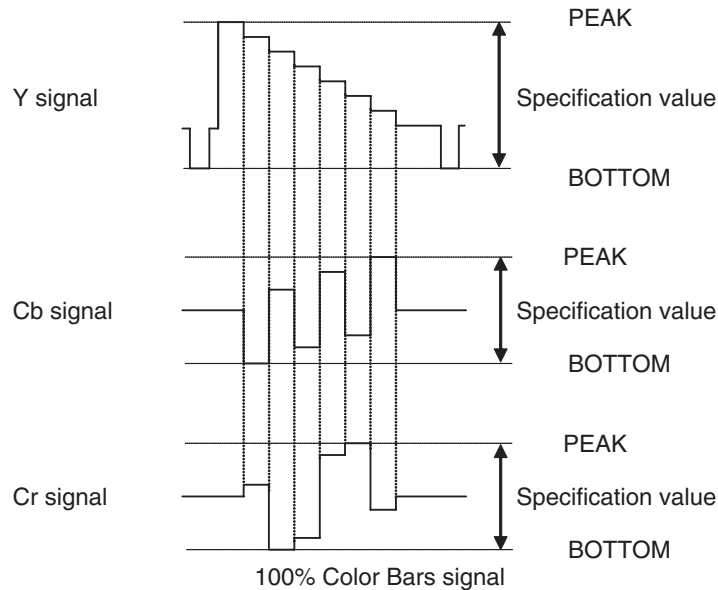

Fig 11.4 Waveform for the case of component 100% Color Bars output

Side A

Fig 11.5: VIDEO signal check point

Check 12:How to judge whether the flash memory has reached its life or not.

If the reaction to user operation is slow or operation is slow in general, there is a possibility that the flash memory has reached its life.

Make judgment regarding the flash memory life by looking at the display of the LD energizing time.

1.Let the LD energizing time displayed.

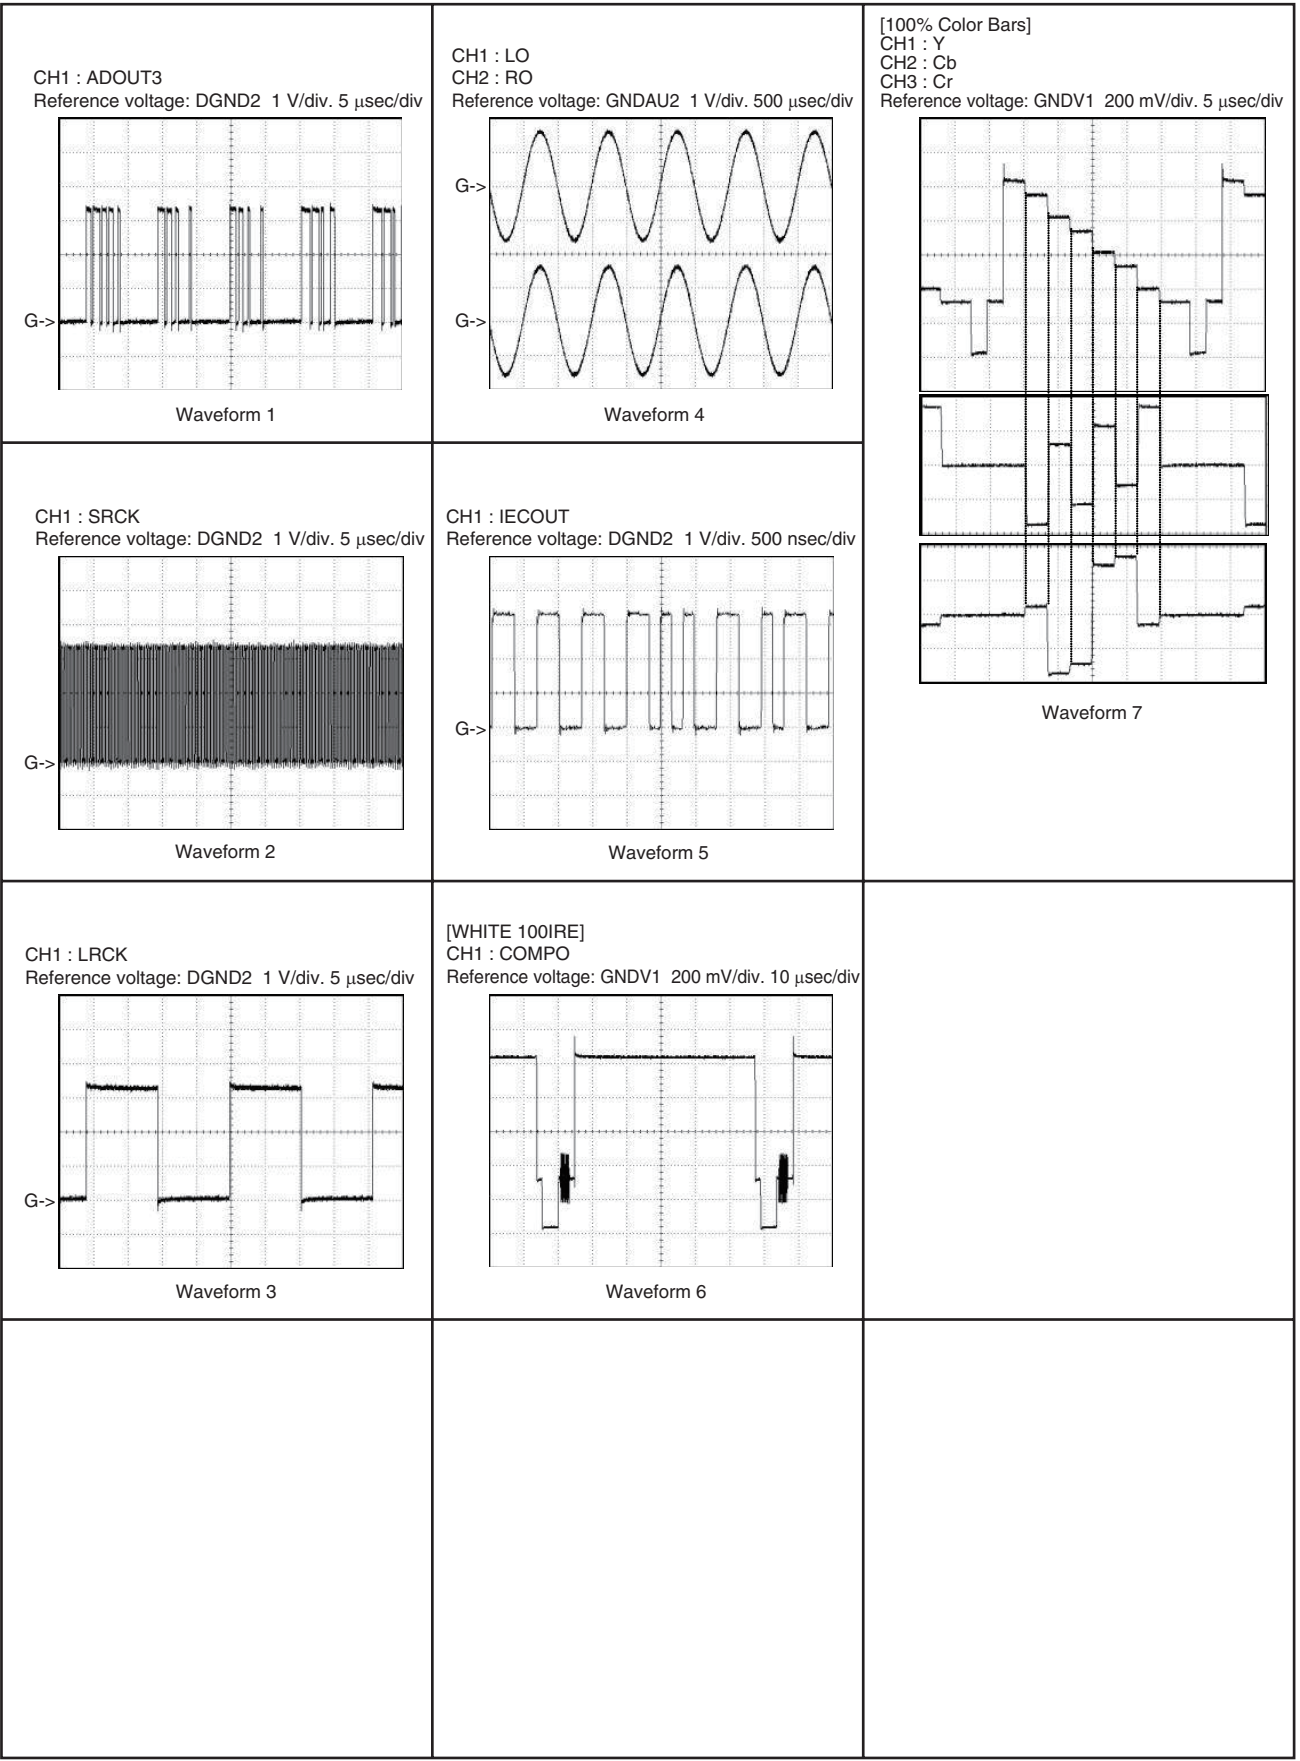

(Refer to the FE test mode for the method of displaying the LD energizing time.)

2.If the second digit from the left of the energizing time display is showing E, such as “*E** ****”, it means that the flash memory has reached its life.

Example:

0E00BB8

AUDIO VIDEO

1

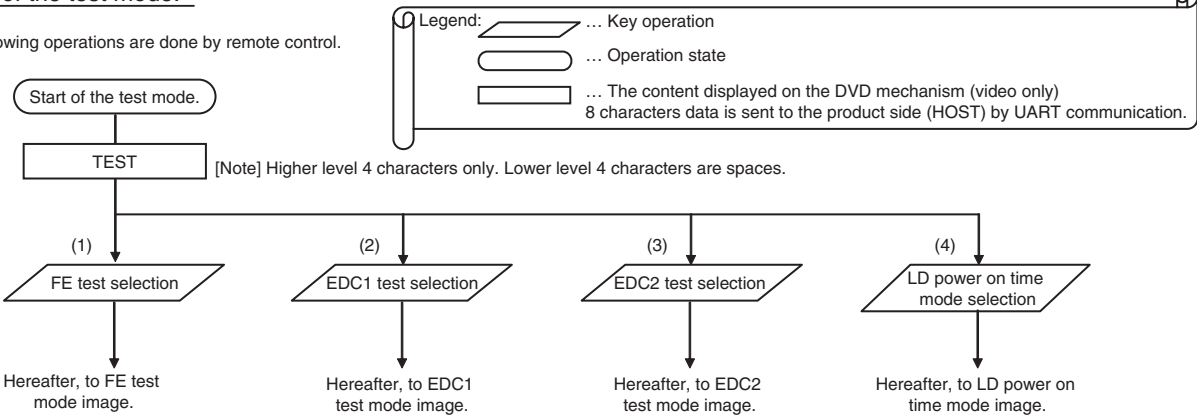

6. SERVICE MODE

6.1 DVD TEST MODE

A

Image of the test mode.

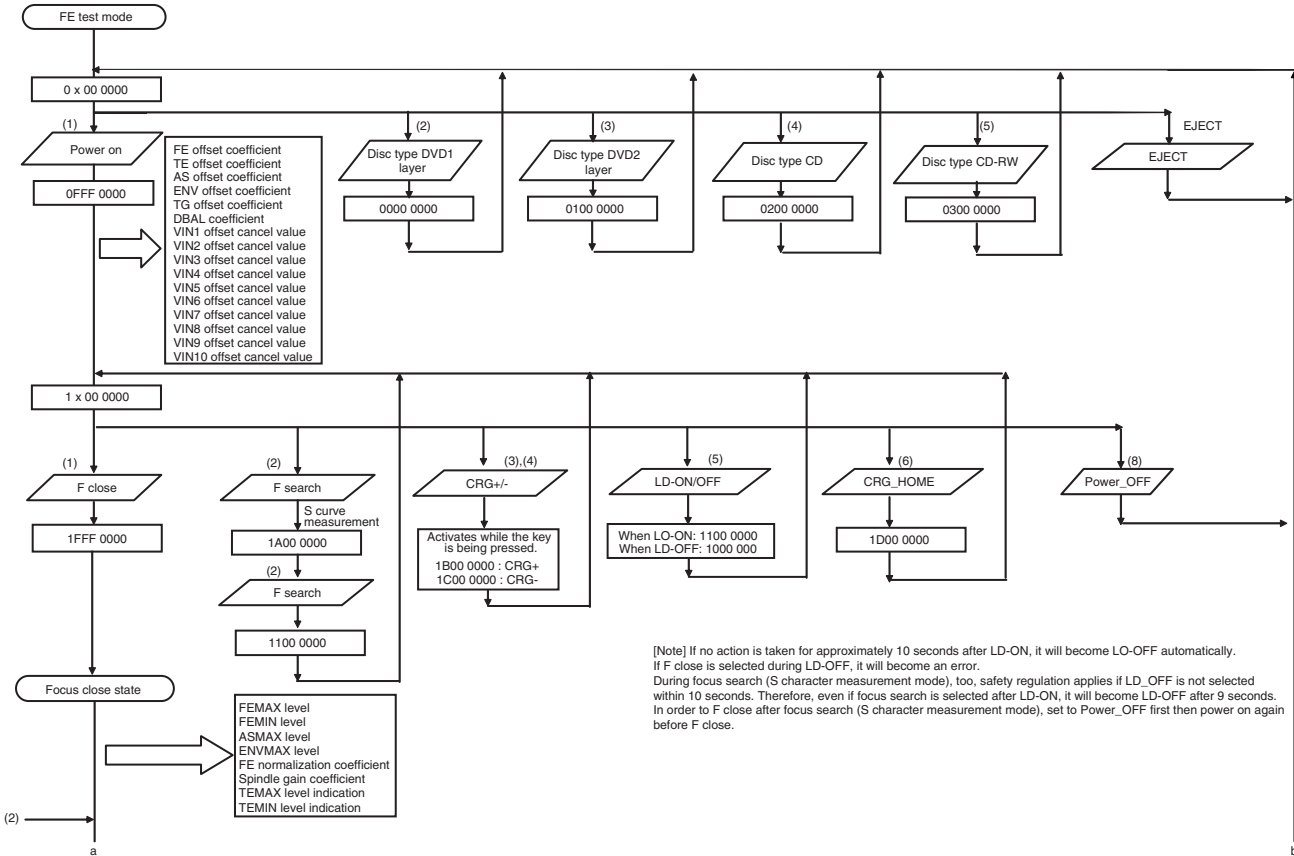

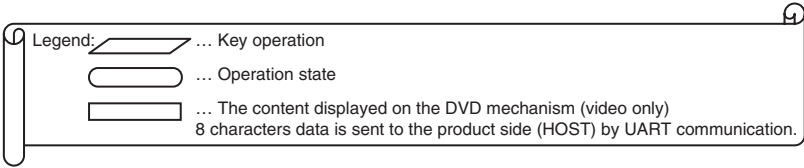

The following operations are done by remote control.

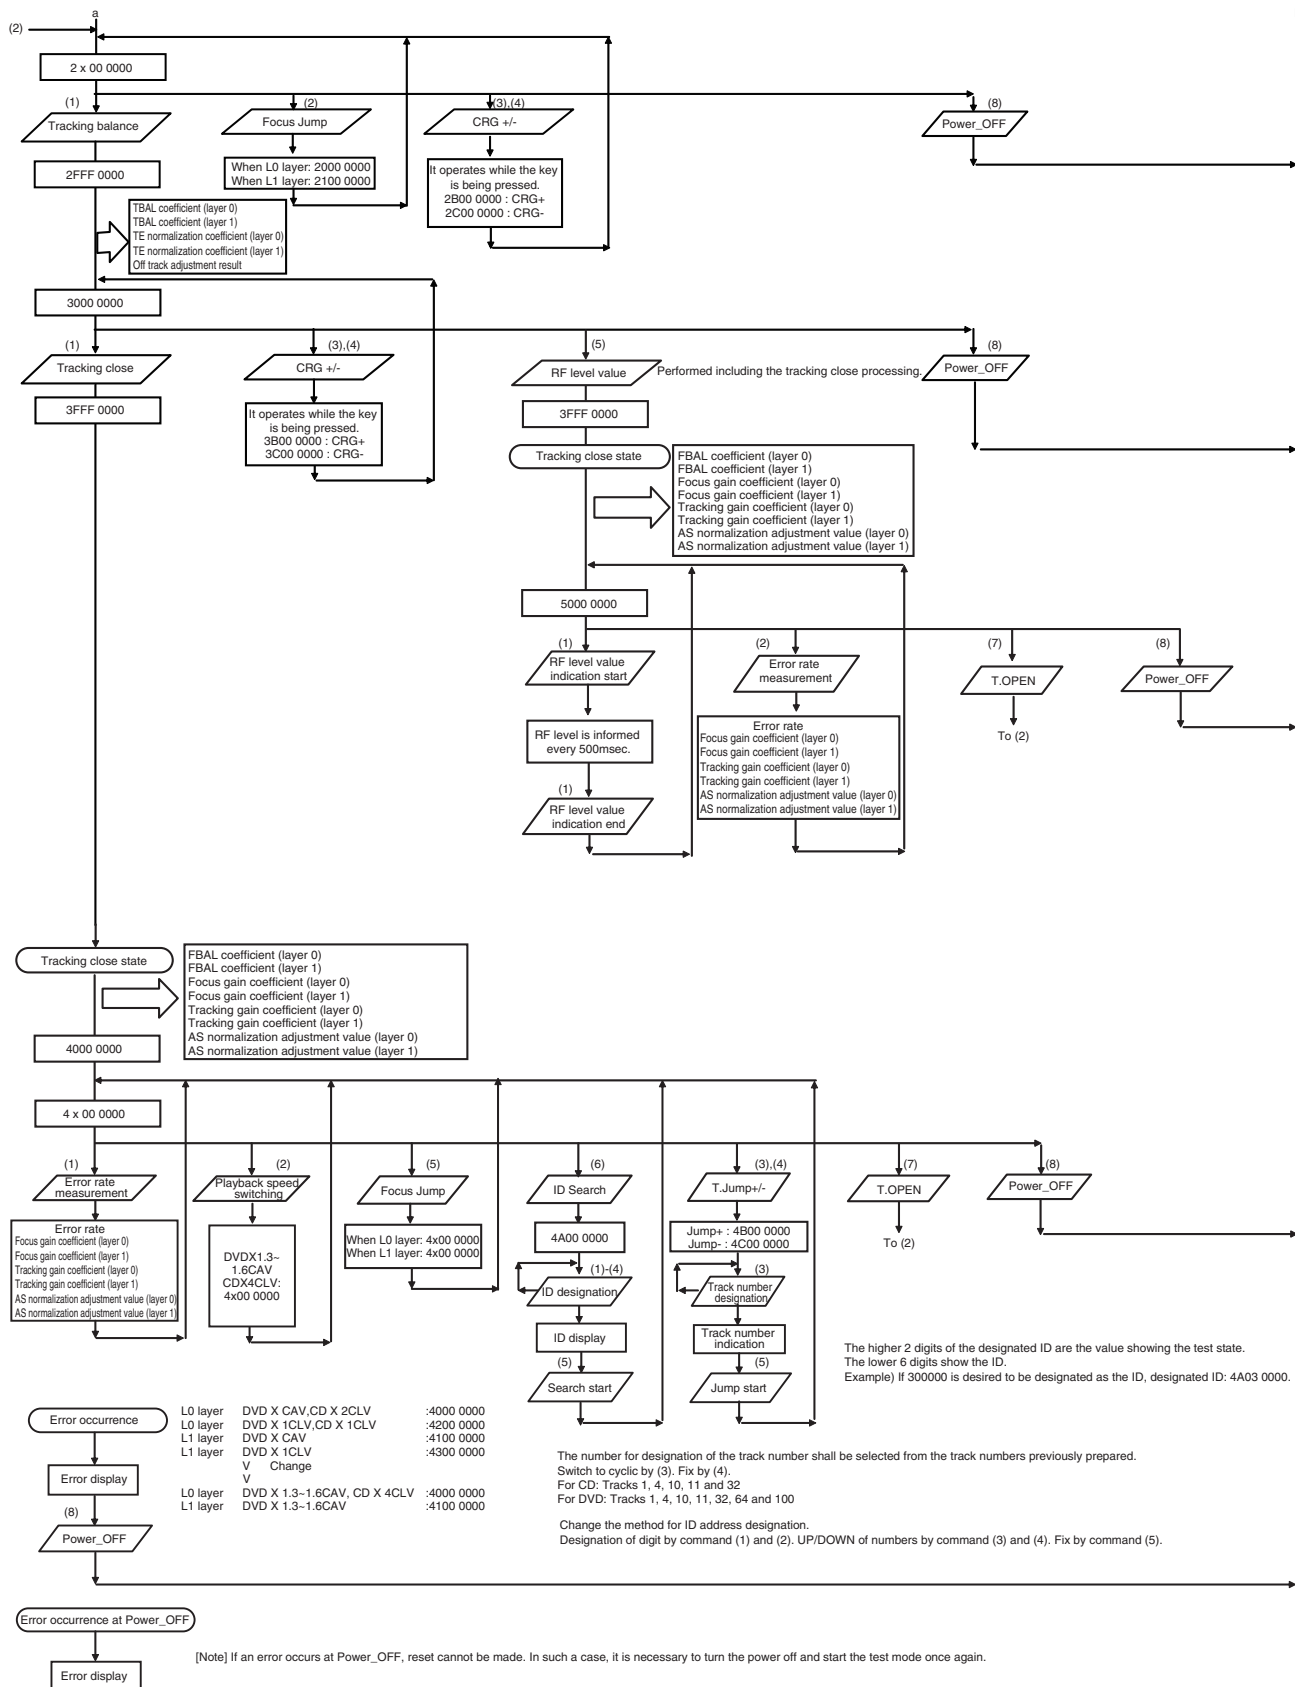

[Note] In order to move on to another test after selecting a test (FE/EDC1/EDC2), it is necessary to restart the DVD mechanism in the test mode.

B

Image of the front end test mode.

EDC. Image of the test mode

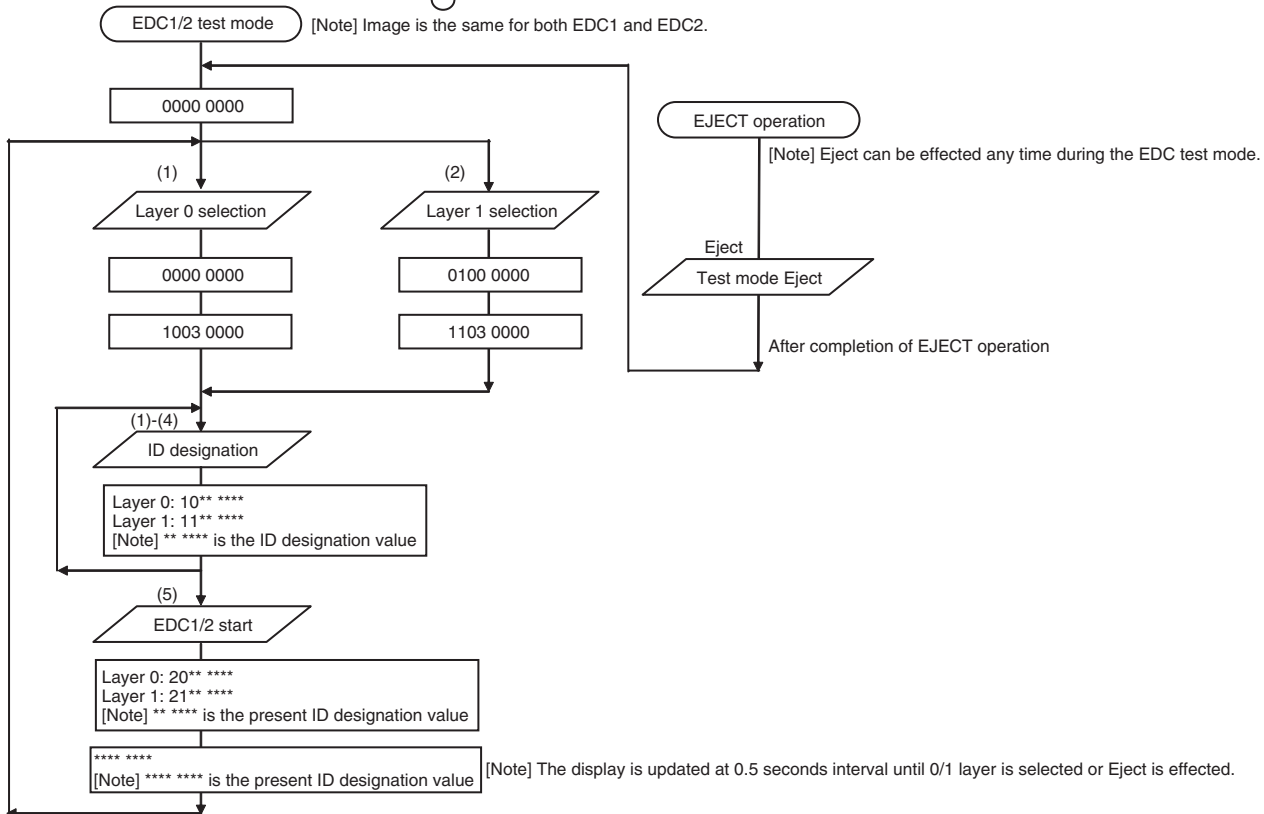

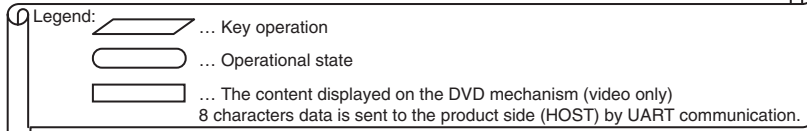

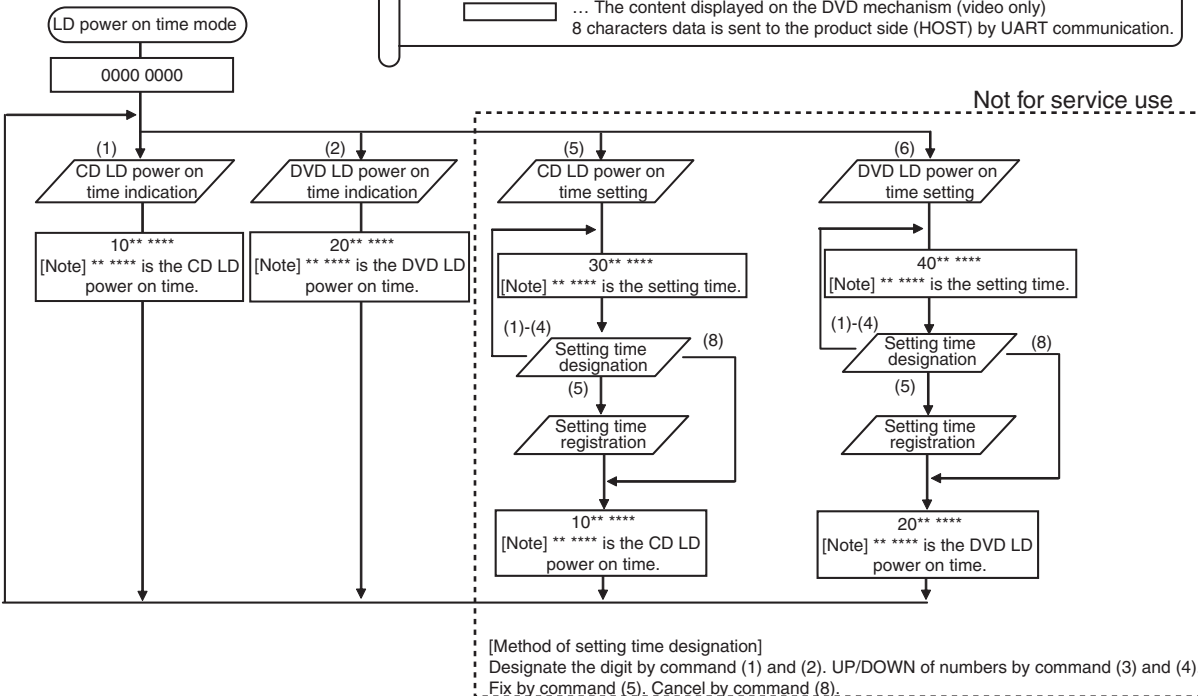

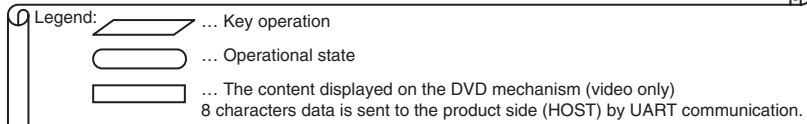

Image of the LD power on time mode.

[Note] If the power on time is 999999 hours or more, it is always reported as 999999 hours.

[Note] If the power on time is "E*****", the value may not be correct due to the life of the flash memory.

X: Cancel the error by operation. -: Error is not cancelled by operation. *: No setting

*1 A content displayed on OSD. As for the items having multiple display patterns, the upper row is for the Japanese version Full GUI, and the lower row is for the Touch Panel model and Full GUI (English version).

*2 A parameter of UART command, such as "receipt error notice", that the DVD mechanism transmits.

*3 CPPM(Content Protection for Prerecorded Media) : A copyright protection technique used in DVD-A. The protection is realized by using the keys recorded on the media and the device key held by the player.

*4 DVD-A compatible model only.

When an error has occurred, only the audio output will be muted but playback operation will continue. Furthermore, acceptance of the user operation will be the same as usual.

*5 AWM (Audio WaterMark): Electronic watermark. Information on the copyright owner or CCI (copy control information) are recorded so that illegally copied discs can be identified.

*6 Notice as an error status will not be given

*7 CPRM(Content Protection for Recordable Media) : A copyright protection technique for digital contents used for re-writable DVD or memory card. (DVD-VR model only)

7. DISASSEMBLY

● Removing the Grille Assy and the Panel Unit (Fig.1)

- 1** Push the [Detach] Button and then remove the Grille Assy.
- 2** Remove the two screws and then remove the Holder.
- 3** Disconnect the connector.
- 4** Remove the two screws and then remove the Panel Unit.

Fig.1

● How to Separate the Upper Case and the Lower Case (Fig. 2)

- 1** Remove the seven screws.
- 2** Open the Upper Case and the Lower Case in the direction indicated by arrows.

Fig.2

● Removing the DVD Mechanism Module (Fig.3)

- ➡ 1** Remove the four screws and then bring down the Bracket toward the Upper Case. See Fig.3 (2/2).
- ➡ 2** Remove the four screws and then bring down the DVD Mechanism Module toward the Upper Case. See Fig.3 (2/2).

Fig.3 (1/2)

- ➡ 3** Disconnect the three connectors.

Fig.3 (2/2)

● Removing the Holder and the Panel (Fig.4)

- 1** Remove the three screws.
- 2** Remove the three screws.
- 3** Remove the two screws and then remove the Panel.
- 4** Remove the screw.
- 5** Straighten the tabs at two locations indicated and then remove the Holder.

[Caution]

The Panel cannot be removed in **3** unless the Holder is removed in advance in **4** and **5**.

Fig.4

● Removing the Mother Unit (Fig.5)

- 1** Disconnect the connector.
- 2** Remove the two screws.
- 3** Remove the two screws.
- 4** Straighten the tabs at three locations indicated and then remove the Mother Unit.

Fig.5

● Removing the Monitor PCB 1/2 (Fig.6)

1 Remove the two screws and then remove the two Guides(Right side and Left side).

2 Pull out the Monitor Assy in the direction indicated by an arrow.

3 Remove the three screws and then remove the Cover.

4 Disconnect the connector.

Fig.6

● Removing the Monitor PCB 2/2 (Fig.7)

1 Remove the two screws and then remove the Holder.

2 Remove the eight screws and then remove the Monitor Assy.

3 Remove the Cover Unit.

4 Disconnect the connector.

[Caution]

The Monitor Assy cannot be removed unless the Cover Unit is removed in advance after removing the screws.

5 Disconnect the three connectors and then remove the Monitor PCB.

Fig.7

● How to hold the mechanism section (Fig 1)

1. Hold the main frame and the top frame.
2. As the mechanical strength of the front part of the top frame is not strong, do not hold this part.
3. Do not touch the switches provided on the top face of the mechanism section.
4. Be careful not to pull the flexible PCB on the side face.

Fig 1

Do not touch this part.

Do not touch this part.

Do not touch this part.

● How to remove the module PCB (Fig 2, Fig 3)

1. Put the mechanism section in locked state (disc load standby position).
2. Hold the mechanism module with its top face down.
3. Make the lands at 2 locations on the pick up flexible PCB short.
4. Disconnect the connectors of the pick up flexible PCB and the SPD L flexible PCB.
(Be sure to disconnect the connectors as the flexible PCB will be damaged if the PCB is removed without removing the flexible PCB.)
5. Remove the solder joint of the lead wire of the load motor and the clamp SW.
6. Remove the two screws, and then remove the module PCB.
(Lift up point A slightly and remove it toward B direction. Be careful as the point C is connected with a flexible PCB.)
7. Disconnect the connector of the 8-12 detection flexible PCB from the PCB.

Fig 2

Fig 3

● How to remove the CRG motor assy (Fig 4)

1. Remove the module PCB according to the instructions in "How to remove the module PCB".
2. Remove the Mylar tape.
3. Remove the flexible PCB of the CRG motor from the connector of the spindle motor.
4. Remove the two screws, and then remove the CRG motor assy.

Fig 4

● How to remove the PU unit (Fig 5)

1. Remove the module PCB according to the instructions in "How to remove the module PCB".
2. Hang the main shaft holding spring to the CRG chassis temporary hanger.
3. Remove the CRG motor assy according to the instructions in "How to remove the CRG motor assy".
4. Remove the holding plate spring of the main shaft.
5. While lifting up the tip of the pick up rack, slide the main shaft, and remove the PU unit.

(Note) When mounting the PU unit again, make sure to do the adjustments of the devices mounted thereon according to the descriptions of the service manual. Furthermore, make sure to hang the main shaft holding spring permanently.

Temporary hanging

Permanent hanging

8. EACH SETTING AND ADJUSTMENT

8.1 DVD ADJUSTMENT

1) Precautions

This product uses 5 V and 3.3 V as standard voltages. The electrical potential that is the reference for signals, is not GND, but VREF (approximately 2.2 V) and VHALF (approximately 1.65 V).

During product adjustments, if the reference voltage is mistakenly taken as GND, and a grounding contact is made, not only would it be impossible to measure the accurate electrical potential, but also the servo motor would malfunction, resulting in the application of a strong impact on the pick up. The following precautionary measures should be strictly adhered to, in order to avoid such problems.

The reference voltage and GND should not be confused when using the minus probe of a measurement device. When an oscilloscope is being used special care should be taken to make sure that the reference voltage is not connected to the probe of ch1 (on the minus side), while the probe of ch2 (on the minus side), is connected to GND. Further, since the body frame of most measurement devices have the same electrical potential as the minus side of the probe, the body frame of the measurement device should be set to floating ground.

If the reference voltage is connected to GND by mistake, turn the regulator OFF immediately, or turn the power OFF

- Remove the filters and wires used for measurements only after the regulator has been turned OFF.
- After the power supply is turned on, regulator ON the following adjustment and measurement are promptly done.
- Whenever the product is in the test mode, the software will not take any protective action. For this reason, special care should be taken to make sure that no mechanical or electrical shock could be applied to the product when taking measurements in the test mode.
- Whenever the EJECT key is pressed to eject the disk, no other keys, other than the EJECT key, should be pressed until the disk eject action has been completed.
- Press the EJECT key only after the disk has stopped completely.
- If the product hangs up turn the power OFF immediately.
- Laser diodes may be damaged, if the volume switch for the laser power adjustment of the pick up unit, is turned.

Attention)

- Test mode starting procedure
Reset start while pressing the ATT and RIGHT keys together.
- Test mode stopping procedure
Reset or ACC OFF-ON.

● SKEW adjustment

When one of the following replacements has taken place, SKEW adjustment for the pick up will be required.

- (1) Replacement of the pick up unit
- (2) Replacement of the spindle motor
- (3) Replacement of the carriage chassis
- (4) Replacement of the main shaft of the pick up unit
- (5) Replacement of the sub shaft of the pick up unit

- Measurement equipment and tools/jigs: Oscilloscope
Driver for SKEW adjustment — TORX driver (T2) (GGK1095)
Bond for fixing the SKEW (GEM1033)
Bond for locking the screw (Locking agents(1401M : produced by THREE BOND))

- Disc used: GGV1018

- Measurement reference: AGND2
- Measurement point: RF

- Connection drawing
DVD core unit

Enlargement

Symptom in case the adjustment is not adequate: Worsening of the error rate 10^{-3}
(Normally 10^{-4} or less.)
Large RF jitter
RF waveform distortion
Tracking drawing/Unstable servo

* Caution: Do not look into the laser light during adjustment.

There are two methods for adjustment, a method whereby the adjustment is made while monitoring the RF waveform using the oscilloscope (method ①) and a method whereby the adjustment is made while checking the RF level in value by OSD (method ②).

The adjustment procedure is shown below. Refer to the paragraph for the service test mode regarding entering of the test mode and the operation procedure.

Adjustment procedure:

1. Turn the DVD mechanism module upside down so that the pick up can be adjusted.
When the module is turned upside down, there is a possibility that the disc is rubbed.
So, first place a coin with the thickness of approximately 1.5mm on a desk, and set the module upside down in a way that section ① in the illustration below comes right above the coin.
2. Install the pick up. (Refer to the section regarding removal of the pick up from the mechanism unit.)
As for the precautions in handling the pick up, refer to the precautions in handling the PU as described below.
3. Method ①:
Connect the oscilloscope by referring to the connection drawing so that the RF signal can be monitored with AGND2 as the reference.
Method ②:
There is no need for setting of any equipment. Proceed to step 4.
4. Turn the power ON, and load the disc for adjustment.(GGV1018)
5. After setting the disc type to DVD layer 1 in the front end test mode, turn the power ON, and move the pick up to the inner periphery. (CRG – Home)
6. Turn the LD ON.
7. Set to focus close, and make auto adjustment for all items under that state, then set to tracking close.
And make auto adjustment for all items under that state as well.
8. Make an intermediate periphery (ID: 100 000) search, and move the PU to intermediate periphery.
9. Method ①:
Proceed to step 10.
Method ②:
After setting to Tracking Open, make all auto adjustments, and set to Tracking Close this time with a command that can be RF displayed. Make auto adjustment for all items under that state as well.
10. Use TORX driver (T2) (GGK1095) for the following.
Method ①:
While monitoring the RF waveform on the oscilloscope, turn SKEW adjustment screw A just a little bit in a way that the level will reach the maximum.
While the pick up is at the intermediate periphery, turn SKEW adjustment screw B just a little bit in a way that the level will reach the maximum.
While the pick up is at the intermediate periphery, turn SKEW adjustment screw A just a little bit in a way that the level will reach the maximum.
(Make adjustment in the order of A -> B -> A, Please end the each adjustment by turning screw clockwise.)
Method ②:
While monitoring the RF level value on the OSD display, turn the SKEW adjustment screw A just a little bit in a way that the level will reach the maximum.
While the pick up is at the intermediate periphery, turn SKEW adjustment screw B just a little bit in a way that the level will reach the maximum.
While the pick up is at the intermediate periphery, turn SKEW adjustment screw A just a little bit in a way that the level will reach the maximum.
(Make adjustment in the order of A -> B -> A, Please end the each adjustment by turning screw clockwise.)
If the error is not good, please perform Method ① again.
11. Turn the power OFF in the test mode, and after confirming that the disc has stopped, eject the disc.
12. Apply adhesive for fixing the SKEW and lock the screw.
Refer to the illustration below for the adhesion points.

Adjustment point

Monitor PCB(Side A)

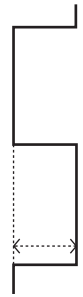

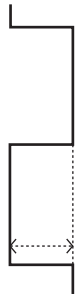

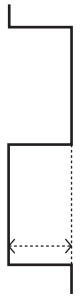

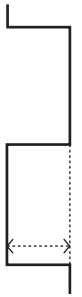

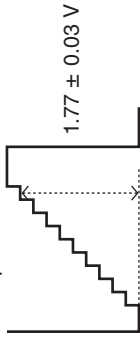

Monitor PCB(Side B)

NOTE : When shutting off the power supply of TC90A96BFG-P, be careful not to energize each IC terminal. However, IIC lines (SDA and SCL) is not included in this case and it is possible to energize them with up to 5 V.

No.	Adjustment item	Input signal	Measurement point	Adjustment point	Adjustment	Note
1	Check 3.3 V power supply voltage	TP:PWRVI to 14.4 V	TP:33V	-	33V = 3.3 ± 0.25 V	
2	Check 2.5 V power supply voltage	TP:PWRVI to 14.4 V	TP:V25	-	V25 = 2.5 ± 0.15 V	
3	Check 1.5 V power supply voltage	TP:PWRVI to 14.4 V	TP:V15	-	V15 = 1.5 ± 0.08 V	
4	Check 5 V power supply voltage	TP:PWRVI to 14.4 V	TP:5V	-	5V = 4.9 ± 0.3 V	
5	Check 8 V power supply voltage	TP:PWRVI to 14.4 V	TP:VCC8V	-	VCC8V = 8.0 ± 0.5 V	
6	Check 18.5 V power supply voltage	TP:PWRVI to 14.4 V	TP:18V	-	18V = 18.5 ± 0.5 V	
7	Check -12 V power supply voltage	TP:PWRVI to 14.4 V	TP:-12V	-	-12V = -12.0 ± 0.6 V	
8	Vcom amplifier output amplitude check	No definition.	TP:COM	-	4.70 \pm 0.10 V 	Connect LCD panel for measurement.
9	Tone voltage amplitude check V1	No definition.	TP:VD1	-	4.20 \pm 0.30 V 	Connect LCD panel for measurement.
10	Tone voltage amplitude check V3	No definition.	CN5501 55pin (TP:VD3)	-	1.75 \pm 0.10 V 	Connect LCD panel for measurement.

No.	Adjustment item	Input signal	Measurement point	Adjustment point	Adjustment	Note
11	Tone voltage amplitude adjustment V5	INo definition.	TP:VD5	-	0.35 ± 0.10 V 	It connects with the LCD panel and it measures it.
12	Tone voltage amplitude adjustment V7	No definition.	TP:VD7	-	0.60 ± 0.10 V 	It connects with the LCD panel and it measures it.
13	Tone voltage amplitude adjustment V9	No definition.	TP:VD9	-	3.30 ± 0.20 V 	It connects with the LCD panel and it measures it.
14	Check RGB digital output	Input white 100% signal from IC5802	TP CCR, CCG, CCB	-	0.70 ± 0.05 V 	(When OSD is displayed in EEPROM adjustment mode, LOW output is mixed to the parts where there is a character.)
15	Image check of RGB signal	Input Color-bar signal from IC5802	Screen	-	-	
16	Composite level adjustment	Input composite image 10-step signal to TP MONVBS (1.35 Vpp ± 1%)	DAC output	Resistor setting of SA13h D5 - 0	The amplitude of the 9-step and the 0-step is 1.77 ± 0.05 V. 	

No.	Adjustment item	Input signal	Measurement point	Adjustment point	Adjustment	Note
17	Image check	Input composite image lamp signal (monochrome) to TP MONVBS	Screen	-	Make sure that tone changes smoothly, and there is no colored area in the entire display.	Execute to verify that IC5401 digital-out is not bridged or "OPEN" ed.
18	Aging	No definition.	-	-	Leave for more than 30 minutes in operation mode.	Input white 100% signal
19	Flicker adjustment	Input black-white reverse signal per 1 line from IC5802	Screen	TP COMDC DC output	Adjust the flicker level to minimum from all directions.	Black-white reverse signal can be the input to TP MONVBS (however, adjustment in RGB comes first). Brightness level of reverse signal should be 50%. Adjustment point can be COM DC of flicker adjustment mode.

SA:*:*h in this chart means the sub-address of TC90A96BFG-P.

8.6 MONITOR TEST MODE

[Outline]

It is a mode used to adjust each preset value stored in the EEPROM for storing the preset values.
The adjusted values are stored in the EEPROM for storing the preset values.

[Method for Mode IN]

The method for Mode IN varies depending on the operational environment.

- When operated as a unit
Reset the monitor micro computer while the [STEST1] terminal is set to Low and the [EPRTTEST] terminal is set to Low.
- When operated as a product
Reset the monitor micro computer while the [STEST1] terminal is set to High and the [EPRTTEST] terminal is set to Low.
Or, turn the power ON while pressing DISP key and FLIP DOWN key.

[Basic explanation on each menu]

- In the "setting content", adjustment range, initial value, and displayed character string of the items preset in each menu are described.

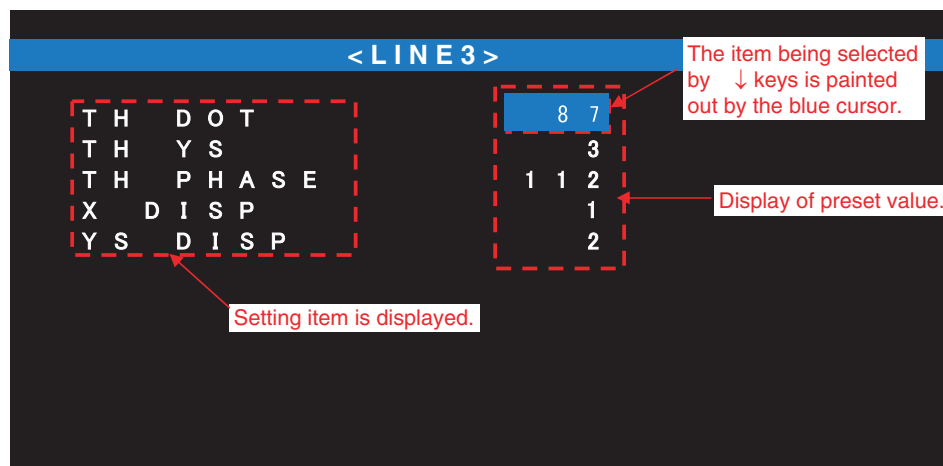

[Example) Setting content]

Setting item		Adjustment range	Initial value
Content	Displayed character string		
Dot search threshold	TH DOT	0-255	112
YS search threshold	TH YS	0-4	3
Phase search threshold	TH PHASE	0-255	112
X disp	X DISP	0-63	32
YS disp	YS DISP	0-4	2

Character string displayed on the screen.

- In the "display specifications", the screen actually displayed under each menu is explained.
Display example is shown below for explanation.

[Example) Display specifications]

- Cursor color
When accessing normally to EEPROM:
The cursor color will change blue → red → blue.
(The blue color continues for the convenience of the display cycle. But it is not an error.)
When accessing abnormally to EEPROM(error):
The cursor color will stay red (blue → red → red) even if the key is released.
Note) When a value is changed continuously, the cursor color may change blue → red → red → ... → blue.
But it is not an error.
(The red color continues for the convenience of the display cycle.)

[Flicker adjustment menu]

[Setting content]

Setting item		Adjustment range	Initial value
Content	Displayed character string		
Common inverted output center value	COM DC	0-255	92

[Line adjustment 1 menu]

[Setting content]

Setting item		Adjustment range	Initial value
Content	Displayed character string		
Bright	BRIGHT	0-255	150
RGB simultaneous contrast(SA0C[D7-0])	CONTRAST	0-255	168
Common inverted output amplitude adjusted value	COM AMP AJ	0-255	150
R output DC offset(SA1A[D11-8])	ROUT BIAS	0-15	8
G output DC offset(SA1C[D11-8])	GOUT BIAS	0-15	8
B output DC offset(SA1E[D11-8])	BOUT BIAS	0-15	8
Main Y contrast(SA0F[D5-0])	RGB CNTRST	0-63	34
Sub Y contrast(SA13[D5-0])	CMP CNTRST	0-63	26
Dither bit(SA0D[D15])	DITHER BIT	0-1	0(OFF)

- The bright value is determined by the image quality setting table based on the user setting step and the common inverted output amplitude adjusted value (COM AMPAJ).
This bright value controls the output of [DACDI] of the monitor micro computer terminal.
Supplement 1) When the bright value is changed in the test mode, however, it will not be reflected in the user setting step value.
Supplement 2) In the test mode during monitor unit operation, the user setting step will not be reflected in the bright value calculation.

Note 1... The "black density (=bright)" adjustment by the user is accomplished only by controlling the common inverted output amplitude, and the brightness of the double window IC is not used.

Note 2... The content of bright and of RGB simultaneous contrast are reference values (adjustable though) only when adjusting other items, and are not stored in the EEPROM.

Note 3... Be careful as the content of R(G/B) output DC offset, main Y contrast and sub Y contrast are different between the displayed values (EEPROM written values) and the register setting values in the double window IC.
(Because the relationship between the double window IC register value and the screen output value is not linear, there is a need for conversion by software.)

The cases where the displayed value (EEPROM written values) and the register setting values in the double window IC are different are summarized below.

[R(G/B) output DC offset]

Displayed value (=adjusted value) (DEC)	EEPROM written value (DEC)	Double window IC register value (BIN)	
15	15	0111	(MAX)
14	14	0110	
:	:	:	
9	9	0001	
8	8	0000	(TYP)
7	7	1111	
:	:	:	
1	1	1001	
0	0	1000	(MIN)

[Main Y contrast, sub Y contrast]

[Setting content]

Setting item		Adjustment range	Initial value
Content	Displayed character string		
Backlight output max value	BL MAX	0x00-0xFF	C4
Backlight output min value	BL MIN	0x00-0xFE	59
Dimmer threshold value (high)	REF H	0x01-0xFE	C0
Dimmer threshold value (low)	REF L	0x00-0xFD	60
External light point (high)	LUM H	0x02-0xFF	E2
External light point (medium)	LUM M	0x01-0xFE	87
External light point (low)	LUM L	0x00-0xFD	52
Backlight point (high)	BL H	0x00-0xFF	C4
Backlight point (medium)	BL M	0x00-0xFF	C4
Backlight point (low)	BL L	0x00-0xFF	68

- The data of the points (coordinates) for the dimmer is stored in the EEPROM but not used for CS calculation as it is changed by the user operation.

Note 1... The adjustment range of each item listed above is the range applicable when the following relationships are satisfied.

The value which destroys the relationship below cannot be set even if it is within the adjustment range.

- Regarding the backlight output minimum value, there is a relationship where;
"backlight output minimum value < backlight output maximum value"
and "backlight output minimum value ≤ backlight point (low)"
- "External light point (low) ≤ dimmer threshold value (low) < external light point (medium) ≤
≤ dimmer threshold value (high) < external light point (high)"
- "Backlight point (low) ≤ backlight point (medium) ≤ backlight point (high) ≤
≤ backlight output maximum value"

Conditions for lighting of the adjustment complete mark “* ”.

Outermost circumference inspection :
In case the outermost circumference inspection has been completed normally.

16 points adjustment :
In case the calibration has been completed normally.

Conditions for the adjustment complete mark “* ” to go out

Outermost circumference inspection :
In case the outermost circumference inspection has never been performed.
In case the EEPROM initialization has been performed.
In case the adjustment value has been initialized.

16 points adjustment :
In case the 16 points adjustment has never been performed.
In case the EEPROM initialization has been performed.
In case the adjustment value has been initialized.

1. Set up TP effective range

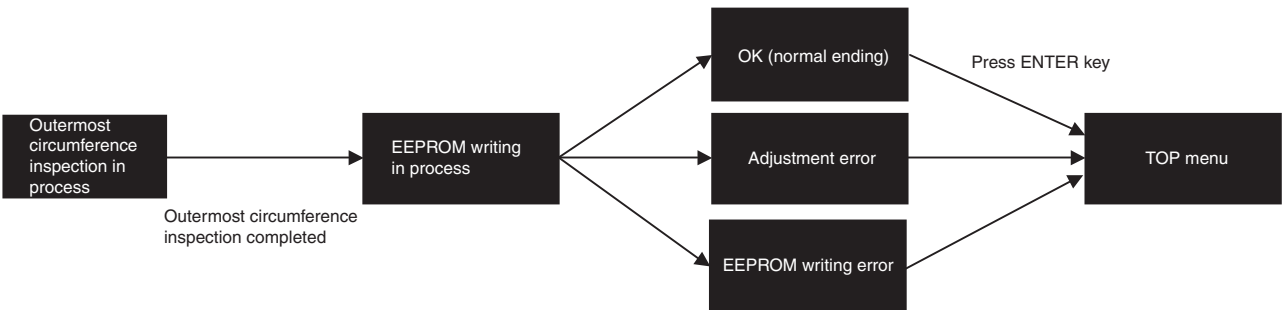

[Outline]

Outermost circumference value of X and Y is obtained by tracing the outermost circumference of the touch panel screen.
When exiting the menu screen by pressing ENTER key, the captured value is stored in the EEPROM.
Furthermore, when storing the value, checking is made as to whether the value is within the range or not.
If the value is within the range, OK is displayed, and X/Y upper and lower limit value and normal ending information, total of 5 byte data, are written in the EEPROM. (In or out of the range check is conducted according to the [Table of allowable range of setting value] shown below.)

In the following cases, however, NG will be displayed without storing the EEPROM captured value.

When the set value is outside of the range. (When the value exceeded the [Table of allowable range of setting value] below.)
However, "adjustment NG information" (1 byte) is written into the EEPROM.
When writing into the EEPROM failed.

The transition of the state for the above described outermost circumference inspection is outlined below.

Refer to the "Memory item list and EEPROM" for the stored area of the setting value in the EEPROM. Initial value and setting value allowable range are as shown below.

A

[Table of BEFORE initial value]

Coordinate	Minimum value	Maximum value
X	43	247
Y	50	238

[Table of AFTER initial value]

Coordinate	Minimum value	Maximum value
X	90	180
Y	90	180

[Table of setting value allowable range]

Coordinate	Minimum value	Maximum value
X	0~72	205~255
Y	0~80	205~255

Operational description	Remote controller key
To TOP menu	MENU_ENTER

2. Set up calibration

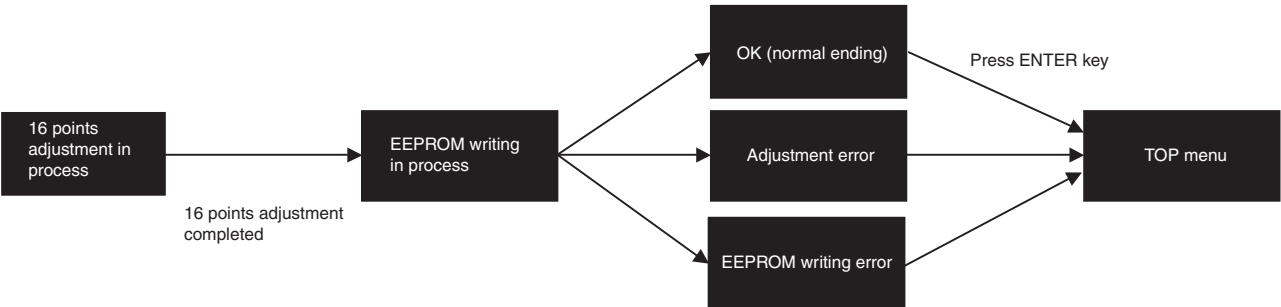

[Outline]

Touch the cursor [+] displayed on the screen. When correctly touched, the cursor will disappear, and the next cursor will appear. Calibration is conducted by repeating this process 16 times. When the 17th point has been finally touched, setting information for the 16 points and the normal ending information, total of 17 byte data, are written into the EEPROM, and the screen returns to the TOP menu.

In the following cases, however, NG will be displayed without storing the EEPROM captured value.

When the menu is exited before touching the 17th point.
However, 'adjustment NG information' (1 byte) is written into the EEPROM.
When writing into the EEPROM failed.

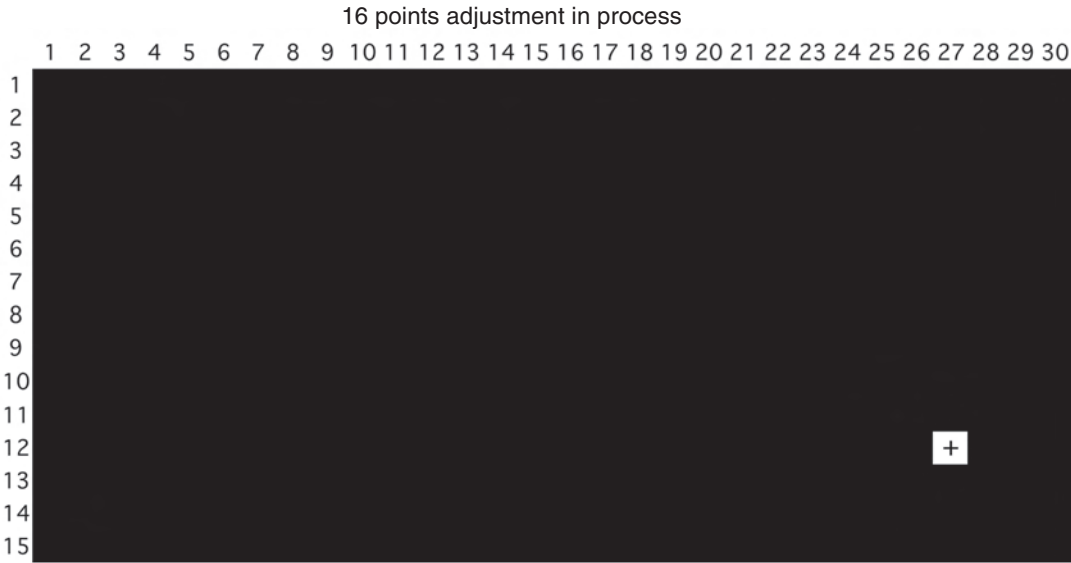

The transition of the state for the above described 16 points adjustment is outlined below.

Refer to the material titled [Memory item list and EEPROM] for the stored area of the setting value in the EEPROM.

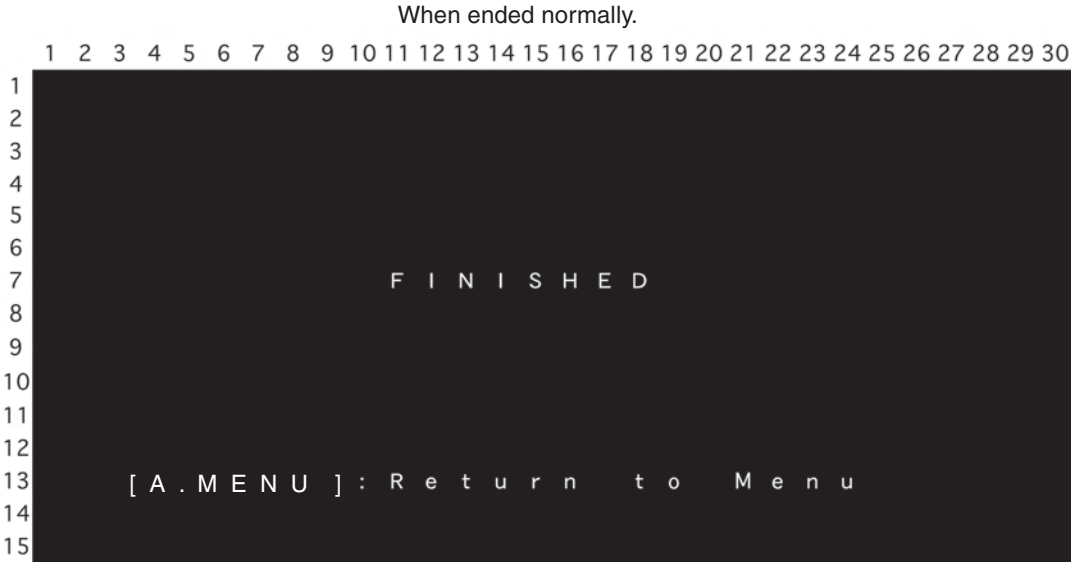

[Display specifications]

F

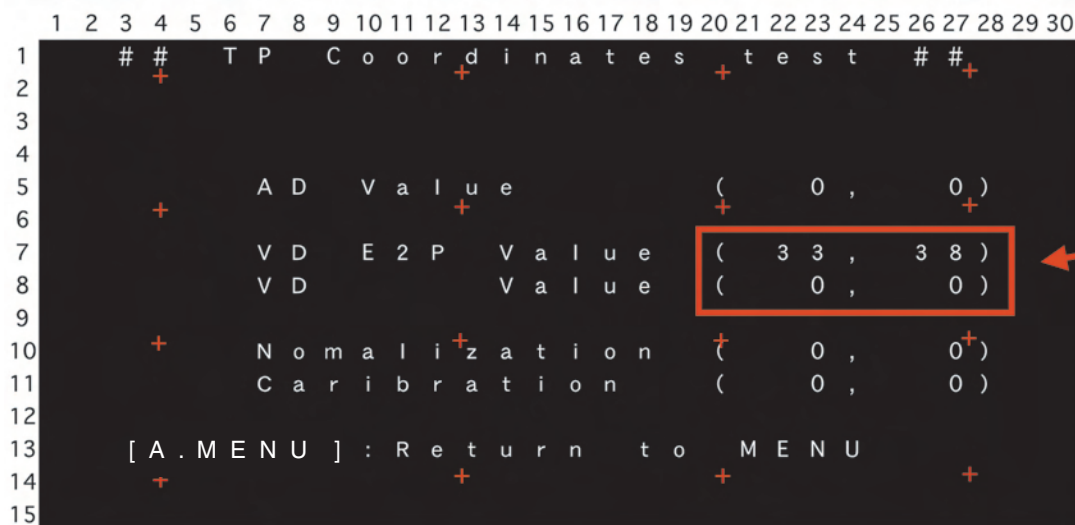

3. TP coordinates test

[Outline]

Coordinate before and after the correction when the touch panel is touched is displayed, and the operation is verified. Furthermore, the cursor can be moved by using the up/down/left/right keys, and the coordinate of the cursor center is displayed.

The cursor is displayed in red at the positions where the cursor was displayed during 16 points adjustment.

[Display specifications]

AD : AD data value (X direction, Y direction), representing the coordinate of the point pressed, is displayed.

VD E2P : VD value (the value registered at the time of circumference setting) preset in the EEPROM.

VD : VD value currently being pressed.

NORMAL : The coordinate (X direction, Y direction), which is the result of normalizing the AD data value currently being pressed within the effective range, is displayed.

CALIBRATION : The coordinate (X direction, Y direction), which is the result of applying the correction by calibration to the normalized coordinate, is displayed.

[Key operation specifications]

Cursor upward movement	↑
Cursor downward movement	↓
Cursor leftward movement	←
Cursor rightward movement	→

[Calibration verification]

[Outline]

- Touch the center of the "+" cursor displayed on the screen. When touched correctly, the cursor will disappear, and the next cursor will be displayed.
By repeating this 16 times, corrected value for each "+" point is obtained.
The information are written into the EEPROM as a data of 16 times. The screen will return to the top menu.

[Display specifications]

"+" changes into red when coordinates to touch are outside the range.

- When terminated normally. (After pressing the 16th point.)

[Key operation specifications]

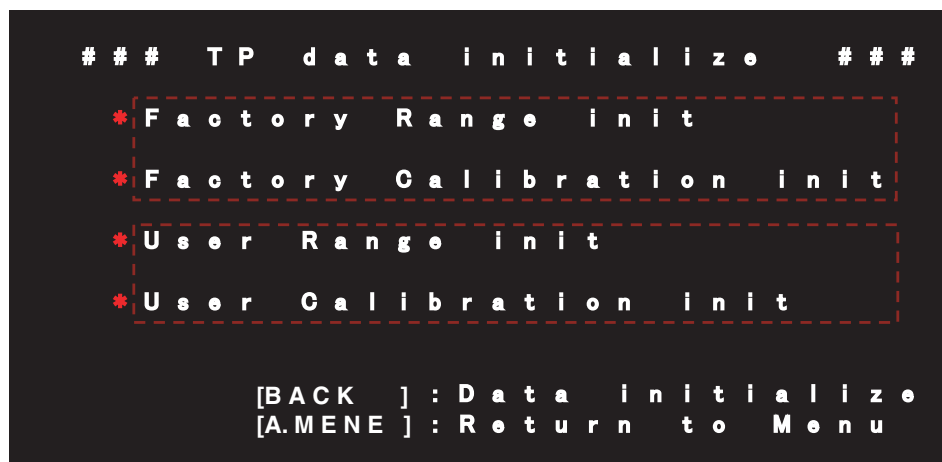

Operational description	Remote controller key
To top menu	MENU_ENTER

[Data initialization]

[Outline]

- Result of outermost circumference inspection and of calibration inspection (corrected value) are returned to their initial values.
As for the initialized items, the initial values are written into the EEPROM and the adjustment information is cleared.

[Display specifications]

- Conditions for the adjustment completion mark (*) to be lighted up.
(The mark will be lighted up if one of the multiple conditions is met.)
 - ☐ Outermost circumference inspection
When the outermost circumference inspection of the calibration for line has been completed normally.
 - ☐ 16 point adjustment
When the calibration inspection for line has been completed normally.
 - ☐ User outermost circumference inspection
When the outermost circumference inspection of calibration for line has been completed normally.
(Because the writing is made to both the Factory region and the User region, **the user side will also be treated as adjusted.**)
When the outermost circumference inspection of the user calibration has been completed normally.
 - ☐ User 16 point adjustment
When the calibration inspection for line has been completed normally.
(Because the writing is made to both the Factory region and the User region, **the user side will also be treated as adjusted.**)
When the calibration inspection of the user calibration has been completed normally.
- Conditions for the adjustment completion mark (*) to go out.
(The mark will go out if one of the multiple conditions is met.)
 - ☐ Outermost circumference inspection
When the above mentioned lighting conditions are not applicable.
When the adjusted value has been initialized (Data initialize).

9. EXPLODED VIEWS AND PARTS LIST

NOTES :

- Parts marked by " * " are generally unavailable because they are not in our Master Spare Parts List.
- The ⚠ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- Screw adjacent to ▽ mark on the product are used for disassembly.
- For the applying amount of lubricants or glue, follow the instructions in this manual.
(In the case of no amount instructions, apply as you think it appropriate.)

12. ELECTRICAL PARTS LIST

NOTE:

- Parts whose parts numbers are omitted are subject to being not supplied.
- The part numbers shown below indicate chip components.

Chip Resistor

RS1/○S○○○○J,RS1/○○S○○○○J

Chip Capacitor (except for CQS.....)

CKS....., CCS....., CSZS.....

- The \triangle mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- Meaning of the figures and others in the parentheses in the parts list.

Example) IC 301 is on the point (face A, 91 of x-axis, and 111 of y-axis) of the corresponding PC board.

	IC 831 (B,145,36) IC	S-812C56AUA-C3K	
	IC 832 (A,145,35) IC	LT3461AES6	
	IC 841 (B,136,88) IC	S-812C33AUA-C2N	
	IC 851 (B,142,54) IC	S-812C50AUA-C3E	
	IC 852 (B,140,69) Regulator	BA00CC0WFP	
	IC 861 (B,134,20) IC	BA00DD0WHFP	
	IC 971 (B,21,16) IC	AN8011S	
	Q 111 (A,89,32) Transistor	2SC4081	
	Q 141 (B,77,34) Transistor	2SC4081	
	Q 161 (B,22,38) Transistor	2SC4081	
	Q 181 (B,25,45) Transistor	2SC4081	
	Q 191 (B,20,55) Transistor	2SC4081	
	Q 231 (B,87,34) Transistor	2SC4081	
	Q 251 (A,67,42) Transistor	2SC4081	
	Q 271 (A,67,37) Transistor	2SC4081	

A

Unit Number : (RC, RD, RI)
Unit Name : Mother Unit

3. DISASSEMBLY	24

1. CIRCUIT DESCRIPTIONS

1. Front end section (MN2DS0016AAUB : IC1501)

MN2DS0016AAUB is a 1 chip LSI for DVD-Player. A DVD-Player system can be constructed by connecting this LSI, driver IC, SDRAM, Flash-ROM, Audio-DAC, etc.

This LSI includes a front end (SODC/FE) which executes RF signal processing, servo processing and decode processing, a back end (AV decoder/BE) which executes video decode processing such as MPEG1/MPEG2/JPEG and audio decode processing such as DVD-Audio/Dolby Digital² /DTS/MP3, and a system controller which controls the system.

The front end section realizes optical head signal computation processing and RF signal processing, digital signal processing (16-8 demodulation, error correction) for DVD-ROM playback according to the DVD specifications, digital signal processing of CD-DA/CD-ROM (error correction), AV decoder transfer, servo control, spindle motor control and seek control.

In the case of MN2DS0016AAUB, the front end servo system waveforms, such as FE, TE and AS, are not observed as in the case of DVD mechanism module (MS4) CX-3183. Please pay attention.

1.1 Analog block (MN2DS0016AAUB : IC1501)

The functions of the analog block are as described below.

1. Reference power circuit
2. SERVO system/DPD system signal processing circuit
Gain switching amplifier and Low Pass Filter (LPF)
3. RF signal processing circuit
RF adding circuit, circuit to make inline, Variable Gain Amplifier (VGA) circuit
4. Laser power control (LPC) circuit
5. A/D converter for SERVO (10 bit, DPD system-4ch), PWM

1.1.1 APC circuit

The optical output of the laser diode (LD) has a large negative temperature characteristic.

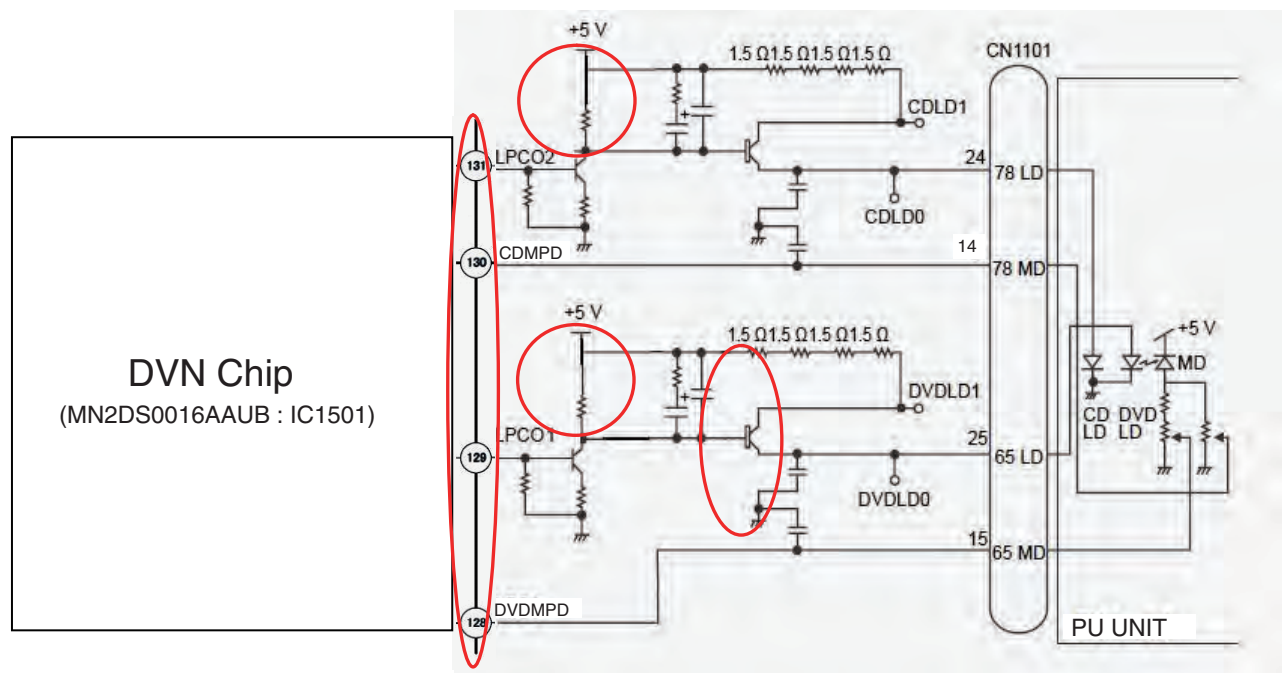

Therefore, if the LD is driven by a constant current, a constant optical output cannot be obtained.

APC circuit is a circuit to control the current so that the output at the monitor diode (MD) will be constant.

MN2DS0016AAUB includes 2 types of APC circuit, one for DVD and the other for CD.

The LD current can be obtained by dividing the measured voltage between DVDLD1 (CDLD1) and 5 V by 6 Ω ($1.5 \Omega \times 4 = 6 \Omega$), in the case of DVD (CD). It will be approximately 50 mA (45 mA) in the case of DVD (CD).

The potential difference between DVDLD1(CDLD1) and 5 V is set to approx. 300 mV(270 mV).

1.1.2 FE forming circuit

Focus error (FE) forming circuit

The signal from PU, FE1 and FE2, are AD converted inside IC1501 and captured. After that, a differential is obtained by taking the offset cancellation into consideration, and FE is obtained.

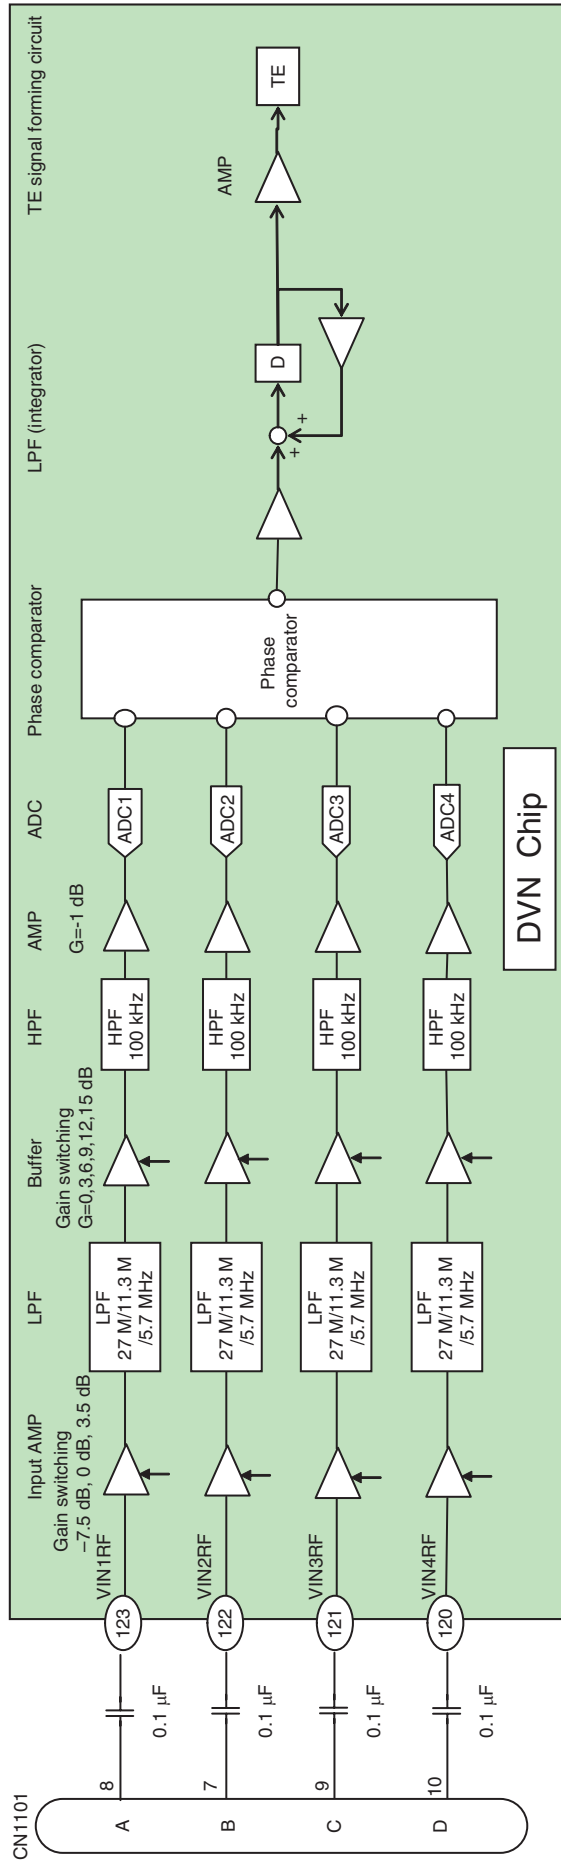

1.1.3 TE forming circuit

Tracking error (TE) forming circuit

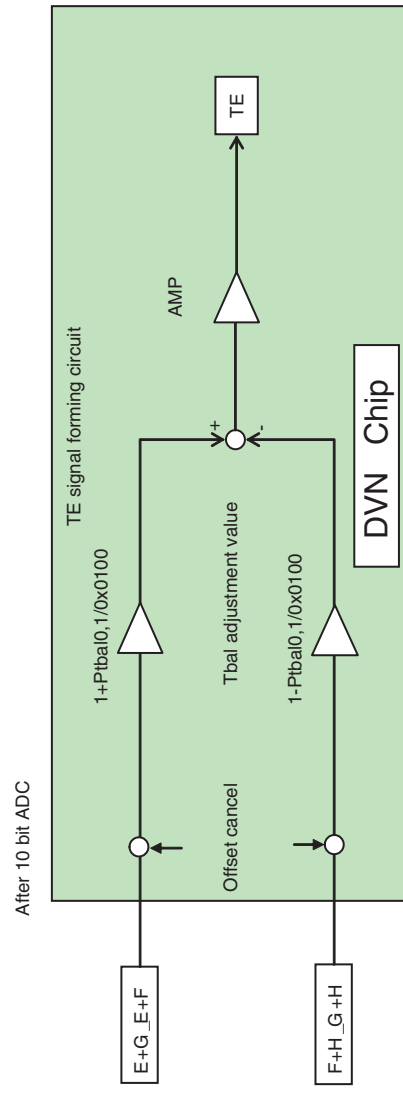

In the case of a DVD, the phase difference method is used for TE forming, and the TE is formed from the phase difference among (A+C) and (B+D).

In the case of a CD, 3 beam method is used, and after entering the signal into a variable amplifier for tracking offset adjustment via an external resistor, it is AD converted, and a TE is formed by the equation of $TE = (E + G_E + F) \cdot (F + H_G + H)$.

- DVD (phase difference TE)

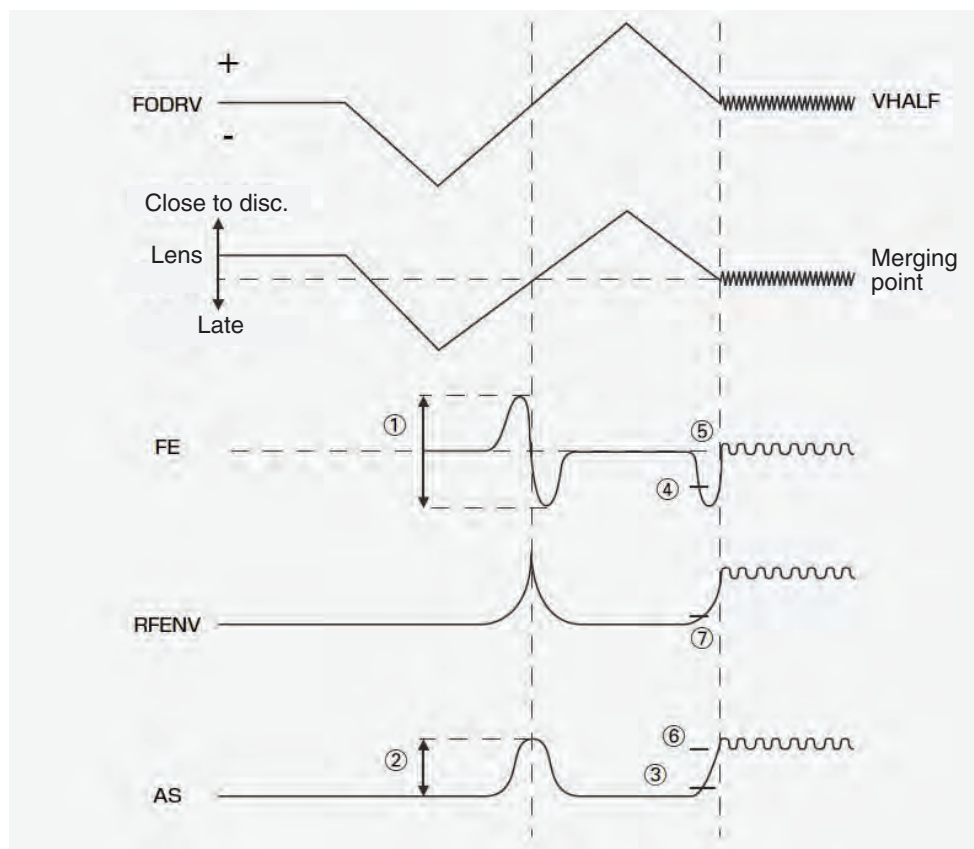

• CD (3 beam TE)

1.2 Servo block (MN2DS0016AAUB : IC1501)

At the servo block, focusing, tracking, servo control of traverse, spindle motor control and seek control are performed.

1.2.1 Focus close

After issuing the focus close command, both the DVD and the CD will perform the following processing.

1. Measurement and optimization of the signal level.

First the PU lens is driven in the direction getting away from the disc, then it is driven in the direction getting close to the disc. At this time, each signal level of FE, AS and RFENV are measured at the focused focal point that the lens passes, and the levels of FE and AS are optimized. (1 and 2 in the figure)

2. Focus adjustment

Next, after detecting the drawing level of FE and AS by driving the lens away from the disc, the focus loop filter is activated and the focus is drawn. (3~6)

3. Confirmation of adjustment

Confirm the drawing at the signal level of AS and RFENV. (6, 7)

The signal levels of FE, AS and RFENV and the focus drive voltage can be checked by the focus search in the test mode.

1.2.2 Tracking close

After issuing the tracking close command, both the DVD and the CD will perform the following processing.

1. Tracking brake

1/2 cycle of the track cross is measured and if the cycle is within the specified range, the brake pulse is output.

The output direction of the brake pulse is determined by the phase relationship of the OFTR and the TKC (binary signal of TE) signals. When it is confirmed that the swinging of the lens against the disc has been controlled, braking will be stopped and enters into drawing. If the drawing conditions are not met within 10 msec, after the brake output, the brake will be ended and entered into drawing.

2. Tracking adjustment

Tracking drive hold processing by the OFTR signal will be performed.

3. Confirmation of adjustment

Checking is made that the number of track jumps within the specified period of time are at the designated numbers or less. The time out for confirmation of adjustment is 8.4 msec. and retry is performed by the command from the microcomputer.

1.2.3 Track jump

In this system, one of the three methods, interval jump, multi jump or traverse seek, is selected depending on the number of target moving tracks.

1. Interval jump

Detailed seek can be performed to execute repeated track jump of 1 track, and it is used when the target track gets close or at the time of seek operation to the adjacent track.

2. Multi jump

Both edges of the track cross signal TKC are counted, and track count move of the designated number is executed. Furthermore, the stepping motor is driven according to the number of jumps.

3. Traverse seek

The stepping motor is controlled by F/W. Track count by TKC is not performed, and the stepping motor is moved according to the number of jumps. In the case of a DVD, seek is performed by maintaining the pick up at the mid point using the mid point servo by the microcomputer.

It indicates the setting for jump switching common to DVD and CD.

Types of target move number of jumps.

DVD

1~10 Interval jump

11~500 Multi jump

501~878 Combination of multi jump and interval jump

879~1756 Traverse seek (short)

1757~ Traverse seek (long)

CD

1~10 Interval jump

11~400 Multi jump

401~780 Combination of multi jump and interval jump

781~928 Traverse seek (short)

929~ Traverse seek (long)

The waveform of track jump is shown on the next page.

Tracking-on process

Interval jump (1 track) DVD

Outer peripheral jump

Inner peripheral jump

Multi jump (32 track) DVD

Outer peripheral jump

Inner peripheral jump

Traverse seek (900 tracks)

Outer peripheral jump

A ± and B ± are measured by setting the LPF of the oscilloscope to 10 kHz.

Inner peripheral jump

Traverse seek (10 000 tracks)

Outer peripheral jump

Inner peripheral jump

1.2.4 Focus jump

Focus jump is a function compatible to 2 layers on one side or 2 layers on both sides. Looking from the object lens, the layer close to the lens is called "layer 0" (L0) and the layer away from the lens is called "layer 1" (L1).

The flow of the focus jump is shown below.

1. The tracking is opened by the layer being played back.
2. A command is issued to execute jump to the target layer.
3. The tracking is closed at the layer after the jump and the playback is resumed.

Incidentally, the process when the jump command is issued is as described below.

1. The lens is accelerated to the target layer until the FE signal detects the focus jump acceleration end level. Acceleration will be ended by force, however, if the time for acceleration timeout has elapsed before detecting the acceleration end level.
2. The drive voltage is not output until the FE signal detects the speed reduction start level, and the lens is moved by inertia.
3. The lens speed is reduced from detection of the speed reduction start level until detection of the speed reduction end level. Speed reduction will be ended by force, however, if the time for speed reduction timeout has elapsed before detecting the speed reduction end level.

1.3 Auto adjustment function

All circuit adjustments are automated in this system.
Details of each auto adjustment are explained below.

1.3.1 VIN1, VIN2, VIN3, VIN4, VIN5, VIN6, VIN9, VIN10 offset cancel

Each signal from VIN1~6, 9 and 10 output by PU is converted to a digital signal by the AD converter in the servo block. Offset cancel is a function to cancel input offset of the AD converter at the time of power ON.

1.3.2 VCO gain adjustment (VARI adjustment)

It has a function to absorb variation of VCO gain among individual LSI by learning so that auto adjustment is made to maintain the VCO gain at a certain level. VCO is locked against the reference frequency for learning. And, a frequency control value (FCNT) is read, and VARI register is adjusted so that the read value becomes the same as the target FCNT value.

1.3.3 FE normalization adjustment

FE signal level measured at the time of focus close is adjusted so that it will become 190LSB at the digital equalizer input stage.

1.3.4 Tracking balance (TBAL) adjustment

At the time of focus close and tracking open, the lens is oscillated in the track direction and the balanced point where the DC offset becomes zero is searched and adjusted by using the Newton-Raphson method.

1.3.5 Learning of tracking error amplitude

At the time of focus close and tracking open, the lens is oscillated in the track direction and adjusted so that the TE amplitude level becomes 190 LSB at the digital equalizer input stage.

1.3.6 OFTR adjustment

The binary threshold level is adjusted to make the OFTR signal into a binary digit.

1.3.7 RF gain adjustment

The gain setting is adjusted by the VGA value in order to set the gain setting of the RF forming circuit to an optimum one according to the PU output.

1.3.8 Focus balance (FBAL) adjustment

The focus position is adjusted so that the RFENV will be the maximum at the time of focus close · tracking open and tracking close.

1.3.9 Focus gain adjustment, tracking gain adjustment

At the time of tracking close, a disturbance is entered into the servo loop to adjust to the target gain intersection.

1.3.10 AS normalization adjustment

The AS signal level is measured for the designated number of samples at the time of track closing, and after A/D conversion at the ADSC, it is fine adjusted to become 64 LSB at the digital equalizer input stage.

All auto adjustments can be confirmed by displaying the adjustment result in the test mode.
The list of auto adjustment coefficient

State	Coefficient	DVD	CD
Power ON	VIN1 offset	06B7~08CD	-
	VIN2 offset	06B7~08CD	-
	VIN3 offset	06B7~08CD	-
	VIN4 offset	06B7~08CD	-
	VIN5 offset	06B7~08CD	06E1~08A3
	VIN6 offset	06B7~08CD	06E1~08A3
	VIN9 offset	-	06B7~08CD
	VIN10 offset	-	06B7~08CD
F close	FE MAX	0E48~36CD	13A5~469A

T close	F gain	0100~0400	←
	T gain	0100~0400	←
	AS normalization	024C~125F	0168~0399

Note) Coefficient values are indicated in hexadecimals. In all cases, specifications at the production line are described. For discs, TDV-582 is used for DVD and TCD-792 is used for CD.

1.4 CIRC block (MN2DS0016AAUB : IC1501)

The CIRC block includes the digital signal processing function (EFM modulation and error correction) of CD-DA and CD-ROM and the digital servo processing function of the spindle motor.

1.5 DRC block (MN2DS0016AAUB : IC1501)

The digital read channel (DRC) is equipped with A/D converter, digital equalizer (DEQ), Adaptive filter, Viterbi detector, digital PLL circuit, RISC interface and periphery circuits for reading of signal on optical disc.

1.6 ATAPI I/F(MS5 base model)

[Outline]

The ATAPI interface is a ATAPI protocol control circuit compatible to ATA/ATAPI-5.

The register of the control section can be directly accessed from the system controller, and the data transfer is made via the SODC internal bus.

● ATAPI interface

* When viewed from I DVD-LSI.

Signal Name	Bits	I/O	Description
HDD[15:0]	16	I/O	ATAPI data input/output
NCS[1:0]	2	I	ATAPI host chip select
DA[2:0]	3	I	ATAPI host address
NIORD	1	I	ATAPI host data read out
NIOWR	1	I	ATAPI host data write
IORDY	1	O	ATAPI host ready output
DMARQ	1	O	DMA request to ATAPI host
NDMACK	1	I	DMA response from ATAPI host
INTRQ	1	O	Interrupt request to ATAPI host
NDASP	1	O	ATAPI drive information
NPDIAG	1	O	ATAPI slave · master diagnosis
NRESET	1	I	ATAPI host hard reset
MASTER	1	I	ATAPI slave · master selection

● ATAPI specifications

- Compatible transfer mode

PIO	mode 0 to 4
Single word DMA	mode 0 to 2
Multi word DMA	mode 0 to 2
Ultra DMA	mode 0 to 4

- 64 Byte data FIFO for host I/F is built-in.
- Auto capturing function of ATAPI command packet is built-in.
- Master · slave compatible

1.8 Clock circuit

[Outline]

By connecting a 27 MHz crystal oscillator to DVD-LSI (IC1501), DACCLK for externally connected Audio-DAC is formed and supplied by the clock generator inside the DVD-LSI in addition to the clock used inside the LSI.

1.9 Audio circuit

[Outline]

① Analog audio signal

Serial 3 line digital output + DACCLK (audio clock) output from DVD-LSI (IC1501) are converted to analog audio signal by Audio-DAC (IC1801), and are output from HOST IF connector (CN1901). Furthermore, analog MUTE signal is also output from DVD-LSI (IC1501) via HOST IF connector (CN1901) simultaneously.

② Digital audio signal (IEC60958/IEC61937)

Digital audio signal (IEC60958/IEC61937), output from DVD-LSI (IC1501), is output via Multi-ch/Ripping IF connector (CN1851).

③ Digital multi-channel audio serial signal

Serial 6 line output from DVD-LSI (IC1501) is output via Multi-ch/Ripping IF connector (CN1851).

④ CD-DA ripping signal

Serial 3 line signal output + SUB-CODE signal, output from DVD-LSI (IC1501), are output in 4 times speed via Multi-ch/Ripping IF connector (CN1851).

2. MECHANISM DESCRIPTIONS

Construction

2.1 Disc loading operation

A

1. When the disc is loaded, 8/12 detection lever R · L will slide, either SW1 or SW2 will be ON—OFF, and the loading motor will start.
2. In the case of a 12 cm disc, the disc is transported and SW3 becomes OFF and SW4 becomes ON, and the microcomputer judges as a 12 cm disc.

B

C

3. In the case of an 8 cm disc, even if the disc is transported, the SW3 OFF and SW4 ON state will not be realized, and the clamping motion will be taken. The microcomputer will judge as an 8 cm disc.

D

E

F

2.2 Disc centering mechanism

1. In the case of a 12 cm disc, the centering arm R · L will open by the disc being transported and both the lock arm R · L being pushed. Furthermore, the disc will be centered by the stopper of either the clamp arm or the centering arm R and stopped, and the clamping motion will be taken.

2. In the case of an 8 cm disc, if a disc is inserted being shifted to the left or the right, the disc will first hit the lock arm R or L. As the lock arm R and L are coupled via the centering arm R and L and the lock will not be released unless both are pushed, the disc will be restricted by the fixed lock arm and centered. The disc pushes out the detection arm while being centered, the disc stops at a position where the motion of the detection arm is completed, and the clamping motion will be taken.

2.3 Clamping operation

1. When a disc is loaded, the clamp lever will be driven by the disc detection arm being pushed by an 8 cm or a 12 cm disc. By engagement of the jump rack and the lever driving gear, the disc clamping motion will start.

2. When the load lever R pushed by the jump rack moves to the front side of the mechanism, the roller shaft restricted by the cam of the load lever R will move downward. And the roller shaft is also restricted by the cam of the cam ring. The power of the roller shaft is transferred to the load lever L via the cam ring, and the load lever L will move to the front side of the mechanism. The coupling of the load cam attached to each load lever, three shafts of the CRG chassis unit and the shaft of the clamp arm will be released, and the clamping motion will be completed at a position where the switch pushing section of the load lever R turns the clamp SW to ON.

2.4 Ejection operation

1. The loading motor reverse rotates, and the ejection motion will start.
2. In the case of a 12 cm disc, the ejection will be completed by OFF→ON→OFF of SW4.
3. In the case of an 8 cm disc, the ejection will be completed when both SW3 and SW6 become ON after either SW3 or SW6 is ON→OFF.

3. DISASSEMBLY

● How to hold the mechanism section (Fig 1)

1. Hold the main frame and the top frame.
2. As the mechanical strength of the front part of the top frame is not strong, do not hold this part.
3. Do not touch the switches provided on the top face of the mechanism section.
4. Be careful not to pull the flexible PCB on the side face.

Fig 1

● How to remove the module PCB (Fig 2, Fig 3)

1. Put the mechanism section in locked state (disc load standby position).
2. Hold the mechanism module with its top face down.
3. Make the lands at 2 locations on the pick up flexible PCB short.
4. Disconnect the connectors of the pick up flexible PCB and the SPDL flexible PCB.
(Be sure to disconnect the connectors as the flexible PCB will be damaged if the PCB is removed without removing the flexible PCB.)
5. Remove the solder joint of the lead wire of the load motor and the clamp SW.
6. Remove the two screws, and then remove the module PCB.
(Lift up point A slightly and remove it toward B direction. Be careful as the point C is connected with a flexible PCB.)
7. Disconnect the connector of the 8-12 detection flexible PCB from the PCB.

Fig 2

Fig 3

● How to remove the spindle motor (Fig 4)

1. Remove the module PCB according to the instructions in "How to remove the module PCB".
2. Remove the flexible PCB of the CRG motor from the connector of the spindle motor.
3. Remove the three motor mounting screws. When mounting or removing the motor, be careful not to deform the CRG chassis.

● How to remove the CRG motor assy (Fig 4)

1. Remove the module PCB according to the instructions in "How to remove the module PCB".
2. Remove the Mylar tape.
3. Remove the flexible PCB of the CRG motor from the connector of the spindle motor.
4. Remove the two screws, and then remove the CRG motor assy.

● How to remove the upper frame assy (Fig 5)

1. Remove the module PCB according to the instructions in "How to remove the module PCB".
2. Remove the vibration-proof spring (right front).
3. Remove the four screws, and then remove the upper frame assy.

● How to remove the PU unit (Fig 6)

1. Remove the module PCB according to the instructions in "How to remove the module PCB".
2. Hang the main shaft holding spring to the CRG chassis temporary hanger.
3. Remove the CRG motor assy according to the instructions in "How to remove the CRG motor assy".
4. Remove the holding plate spring of the main shaft.
5. While lifting up the tip of the pick up rack, slide the main shaft, and remove the PU unit.

(Note) When mounting the PU unit again, make sure to do the adjustments of the devices mounted thereon according to the descriptions of the service manual. Furthermore, make sure to hang the main shaft holding spring permanently.

Fig 6

● How to remove the load gear assy (Fig 7)

1. Remove the module PCB according to the instructions in "How to remove the module PCB".
2. Remove the upper frame assy according to the instructions in "How to remove the upper frame assy".
3. Remove the two screws, and then remove the load gear assy.
4. Remove the jump rack and the rack attached spring.

Fig 7

● How to make the empty clamp state (motor driven empty clamp) (Fig 8)

1. While driving the motor in the clamping direction, pull the clamp lever toward you.
2. Even if the clamp lever has pushed the jump rack putting it in the clamped state, continue pulling the clamp lever toward you lightly until it is stopped. It should be noted that the ejection will not work if the bar ring of the clamp lever is positioned at the center of the hook shape. (Fig 9)
3. When the clamping motion is finished, stop the motion before the convex shape of the jump rack touches the load lever R. (Fig 10)

Fig 8

Fig 9

Make sure that the bar ring of the clamp lever does not get inside the clamp spring.

Fig 10

● How to make the empty clamp state (manual empty clamp) (Fig 11)

1. Remove the module PCB according to the instructions in "How to remove the module PCB".
2. Remove the upper frame assy according to the instructions in "How to remove the upper frame assy".
3. Remove the load gear assy according to the description in "How to remove the load gear assy".
4. While pulling the clamp lever toward you, pull the slip stopper of the load lever R, and make it clamp.

Fig 11

● How to remove the load motor assy (Fig 12)

1. Remove the module PCB according to the instructions in "How to remove the module PCB".
2. Remove the upper frame assy according to the instructions in "How to remove the upper frame assy".
3. Remove the load gear assy according to the description in "How to remove the load gear assy".
4. Make the empty clamp state according to the description in "How to make the empty clamp state (manual empty clamp)".
5. Remove the screw and then pull out the load motor assy from the side.

Fig 12

● How to remove the CRG assy (Fig 13)

1. Make the empty clamp state according to the description in "How to make the empty clamp state (motor driven empty clamp)".
2. Remove the module PCB according to the instructions in "How to remove the module PCB".
3. Remove the upper frame assy according to the instructions in "How to remove the upper frame assy".
4. Remove the three vibration-proof springs.
5. Remove the CRG assy by lifting it up until the shaft slips out of the damper.

● How to remove the disc guide assy (Fig 13)

1. Make the empty clamp state according to the description in "How to make the empty clamp state (motor driven empty clamp)".
2. Remove the module PCB according to the instructions in "How to remove the module PCB".
3. Remove the upper frame ASSY according to the instructions in "How to remove the upper frame assy".
4. Remove the two screws, and then remove the disc guide by lifting it up and placing it at 45° position and further sliding it to the left.

Fig 13

● How to remove the roller assy (Fig 14)

1. Remove the module PCB according to the instructions in "How to remove the module PCB".
2. Remove the upper frame assy according to the instructions in "How to remove the upper frame assy".
3. Remove the extension spring.
4. Remove the load gear assy according to the description in "How to remove the load gear assy".
5. Make the empty clamp state according to the description in "How to make the empty clamp state (manual empty clamp)".
6. Remove the disc guide assy according to the description in "How to remove the disc guide assy".
7. Remove the CRG assy according to the description 4 and 5 in "How to remove the CRG assy".
8. Push the slip stopper of load lever R toward the back, and move it until the end.
9. Remove the load motor assy according to the description in "How to remove the load motor assy".
10. Remove the roller arm spring R • L.

As for the roller arm spring R, remove only the tip hanging on the load lever R.

11. Remove the extension spring, and then remove the roller assy by lifting it up to the highest position and sliding it toward the right.

(Note) Be careful not to deform the shutter when removing the roller assy.

Fig 14

● How to remove the damper (Fig 15)

1. Make the empty clamp state according to the description in “How to make the empty clamp state (manual empty clamp)”.
2. Remove the module PCB according to the instructions in “How to remove the module PCB”.
3. Remove the upper frame assy according to the instructions in “How to remove the upper frame assy”.
4. Remove the three vibration-proof springs.
5. Remove the CRG assy according to the description 4 and 5 in “How to remove the CRG assy”.
- 6.1 Release the clinch by holding the A section of the damper attached to the main frame using a pair of pliers and lifting it up toward B direction.
(As there will be a gap made at section C, remove the damper.)
- 6.2 Insert a screwdriver into section D, release the clinch by lifting up a metal plate on the other side, and remove the damper.
- 7.1 Remove the CRG motor assy according to the description 3 and 4 in “How to remove the CRG motor assy”.
- 7.2 Remove the damper.

Fig 15
